Mr. Thomas Bach

President

The International Olympic Committee

Dear Olympic friends

Making sport a force for good in the world was central to the thinking of Pierre de Coubertin when he founded the International Olympic Committee 131 years ago. For him the Olympic Games were always much more than just a sporting event. He was an educator himself, so from the very beginning sport and education were linked to the Olympic Games. Coubertin wanted to make the world a better place through sport and its values. This remains the overarching mission of the IOC and the Olympic Movement to this day.

This intrinsic connection between sport and education is also at the heart of the curriculum of Rashtriya Raksha University. As an institution of national importance, your University prides itself on its academic excellence and in particular on promoting physical education and the role of sport in society. Through the recently established University's Bharat Centre of Olympic Research and Education, a valued member of the worldwide Olympic Studies and Research Centres network, you are committed to fostering Olympic education research and opening the door for international academic exchange and cooperation.

The Olympic Movement greatly benefits from the knowledge and research coming from the academic world. This is why I would like to congratulate all the organisers of this first International Olympic Research Conference held in India. Passion for sport runs deep in India, and the country has always been an important member of the Olympic community. This conference is therefore a timely contribution to promote the Olympic spirit in the great sporting nation of India and to inspire its people with the timeless and truly universal ideas of Pierre de Coubertin.

Prof. (Dr.) Bimal N. Patel

Vice-Chancellor

Rashtriya Raksha University

Dear All,

The Bharat Centre for Olympic Research and Education (BCORE) at Rashtriya Raksha University (RRU) stands as a pioneering initiative in India's quest to establish itself as a global sporting powerhouse. As we set our sights on hosting the future Olympic games, BCORE will play a crucial role in ensuring India's robust participation through a multi-pronged approach encompassing education, training, research, extension, and international collaboration.

India's Olympic aspirations require more than just infrastructure and athletic talent; they demand a knowledge-driven, research-backed, and policy-oriented ecosystem that fosters excellence in sports governance, athlete development, and sports science innovation. Through cutting-edge research, strategic policy inputs, and high-impact training programs, BCORE aims to create a world-class environment for athletes, coaches, sports administrators, and policymakers.

BCORE will act as a think tank, facilitating collaborations with global sporting institutions, universities, and Olympic research centres. By leveraging international best practices and integrating them with India's sporting culture, we will build a sustainable and inclusive model for Olympic success.

Additionally, the centre will focus on sports diplomacy, technology integration in sports, ethical governance, and athlete well-being, positioning India as a leader in Olympic research and education. With BCORE at the forefront, we are laying the foundation for an India that not only hosts the Olympics but emerges as a formidable force in the global sporting arena.

I sincerely thank the Ministry of Youth Affairs and Sports, the Ministry of Home Affairs, and the Indian Olympic Association for their unwavering support and encouragement.

Dr. Utsav Chaware

Director

Bharat Centre of Olympic Research and Education
Rashtriya Raksha University

Dear Fellow Olympians,

The 1st Edition of the Indian Olympic Research Conference, organized by the Bharat Centre of Olympic Research and Education (BCORE), marks a pivotal moment in our nation's Olympic journey. From its inception on Olympic Day, June 24th, BCORE has strategically cultivated an ecosystem that brings together all stakeholders of the Olympic movement in India.

Today's world is moving towards a cross-disciplinary approach that drives innovation. Sports is no longer a singular domain, but a multiversal ecosystem encompassing sports infrastructure, economics, management, and technology. The Olympic landscape now extends far beyond athletic performance, integrating Olympic tech, mega event economics, and interdisciplinary research.

Our mission goes beyond traditional research paradigms. We emphasize a holistic approach to Olympic studies, recognizing that research is central to addressing modern challenges. Our focus is on nurturing the most critical innovators: academicians, young scholars, and students who will shape the future of our host cities and nation.

When we speak of Olympics, we aspire to create a transformative mindset. It begins with understanding, evolves through thinking, sparks dialogue, generates ideas, and ultimately transforms into tangible innovation.

Concept Note

The 1st edition of International Olympic Research Conference organized by BCORE aims to provide a global platform for knowledge exchange, research presentation, and collaborative learning in the field of Olympics and Olympic studies. This inaugural edition seeks to bring together leading researchers, experts, and practitioners from around the world to foster academic discourse and promote innovative practices in Olympic research and education.

Key Features

Expert-led Sessions:

Renowned researchers and experts in Olympic studies will deliver lectures, sessions, and facilitate discussions on current trends, challenges, and opportunities in the field.

Comprehensive Hosting:

BCORE will provide accommodation for OSRC and NOC members, and facilitate accommodations at a nominal cost for all the other participants.

Research Presentations:

Members of the Olympic Studies Research Centre (OSRC), National Olympic Committees and other delegates /scholars /academicians will have the opportunity to present their research findings and ongoing projects to a diverse, international audience.

Cultural Immersion:

Participants will enjoy a guided tour of the heritage city of Ahmedabad and Statue of Unity offering insights into Indian culture and history.

Global Participation:

BCORE welcomes attendees from India and around the globe, fostering international collaboration and knowledge sharing.

Industry Exposure:

Attendees will have the unique opportunity to network and collaborate with industry experts, and entrepreneurs.

TIME	SESSION	TOPIC
DAY 1: Olympic Host City Selection and Urban Transformation		
10:00AM - 11:00AM		Opening Ceremony
11:30AM - 1:00PM	Keynote Session	2036 Vision: Pathway to Become an Olympic Host- Bid process and Strategic planning.
WORKING LUNCH & NETWORKING		
2:30PM - 4:00PM	Expert Session	Global Best Practices and Comparative Analysis in Olympic City Selection and Urban Legacy
HIGH-TEA & NETWORKING		
4:30PM - 5:30PM	Panel Discussion	Urban Development for Mega-Sporting Events: Challenges and Solutions for India- (Urban regeneration, infrastructure needs, and CSR, & PPP Model)
DAY 2: Economic Strategies and Technological Innovation		
9:30AM - 11:00AM	Keynote Session	Financing the Future: Innovative Economic Models for Hosting the Olympics in India- insights into sustainable funding and investment
11:30AM - 1:00PM	Expert Session	Smart Sports Management- AI and IoT; Innovations in Sports, Fan Engagement and e-sports
WORKING LUNCH & NETWORKING		
2:30PM - 4:30PM	Panel Discussion	Balancing Costs and Benefits: Financial Strategy for Olympic Ambitions- A look at economic modelling, budgets and long-term analysis.
4:30PM - 5:30PM	High Tea Session with Workshop/ Exhibition	Wearable Technology and Advanced Equipment for Olympics
5:30PM - 6:30PM	Paper Presentations	Topics could include Tech Innovations for Mega Event Operations and Economic Benefits vs. Costs: A developing nation's perspective and others

Towards Resilient Global Sporting Venues: Leveraging Earth Observation in Hazard Management and Escape Planning

Ms. Riya Ghadyale, Mr. Sourav Dey, and Dr. Subhajit Bandopadhyay

Centre for Disaster Risk Reduction (CDRR), School of Internal Security and SMART Policing, Rashtriya Raksha University, Gandhinagar, Gujarat, India

Abstract:

Extreme events and warming temperatures will shrink the pool of potential hosts for global sporting events like the Olympics. The latest study by the World Economic Forum found that there could be up to a 27% decline in cities viable worldwide to host the Olympic marathon due to climate change by the late 21st century. Therefore, climate change, global warming, and frequent extreme events are vital in successfully organizing any international sporting event such as the Olympics. Moreover, the frequency of such natural disturbances has also increased with rapid changes in anthropogenic activities and subsequent temperature rise. To effectively address the situation during an event, a pre-established microscale hazard management strategy tailored to the hosting city and venue would be essential. In such context, the advancement of earth observation technology with high-resolution satellite datasets provides a promising way to predict, identify, monitor, and quantify microscale hazards at the city scale to venue scale. With this motivation, we conducted a pilot study in and around the largest stadium in the world – Narendra Modi Stadium to identify and predict the potential range of microclimate-induced and anthropogenic hazards (i.e. extreme heat, drought, floods, and CBRN). We sought to provide potential high-risk zones early mentioned hazards and consequently escape management routes followed by assembly places for the safety concerning the optimum security of the spectators. This study was carried out in 2 phases: the first phase involves the prediction, identification, and quantification of potential heat pockets, water-logged zones, and gas concentration points in and around the stadium. The second phase involves providing potential escape routes from the stadium during any hazard or emergency. The pilot study includes high-resolution image processing, GIS-based network analysis, predictive modelling, and classification through desktop- based and cloud-computing approaches. Our findings reveal a robust outcome of potential hazard zonation mapping, predictive modelling of micro-scale hazards, and escape routing at the city level to venue scale. Therefore, to guarantee the safety and security of athletes and spectators, this study contributes to an event management strategy that facilitates the smooth execution of events by leveraging earth observation technology.

Global Health and Pandemics through the Lens of Sport for Development

Ms. Kelebogile Matolela, University of Botswana, Gaborone, Botswana

Abstract:

The study aims to contribute to research on global health education, particularly on how to best tackle pandemics using the Sport for Development (SDF) approach. The study attempts to explore to what extent a group of sport people identify sport initiatives with behaviours that contribute to the scaling down of present and future pandemics. The research questions are: 1) What physical interventions did the sport community identify as potential causes that can reduce future pandemics such as Covid-19 and MPox? 2) To what extent did the sport community show a systematic view aligned to the Sport for Development approach? The methodology was a primary and secondary qualitative approach which through purposive sampling conversed with five representatives of the sporting community (sport organisation's manager, coach, athlete, fan, and sport for development specialist), who were asked about the potential causes of and ways to prevent future pandemics. The research also analysed documents on sport for development and the level of systematic thinking reflected. Majority of the respondents focused on the physiology aspect and a few mentioned educational and social

aspects, which then points to the vital need to integrate the Sport for Development concept into general sport activities. In Sport for Development, sport policies emphasises the concept of “sport for all” especially inclusion and solidarity, which highlights sport as a fundamental human right for everyone and being in solidarity with those affected by pandemics. Sport Organisations should embrace the sport for development notion which fundamentally uses policies and programmes to achieve non sporting goals such as education, health, modern technology, environmental sustainability, policy response and strategic intervention on regional conflicts.

Digital Transformation in Olympic Sports Management: Driving Innovation and Economic Strategies for the Modern Games

Dr. Rajesh Pratap Singh, Professor of Physical Education, CSJM University, Kanpur, Uttar Pradesh, India

Abstract:

The Olympic Games are a testament to humanity's pursuit of excellence and unity, drawing millions of participants and viewers globally. As digital transformation reshapes industries, the management of the Olympics must evolve to integrate technologies such as IT, AI, and blockchain. This study explores how digital tools can redefine smart infrastructure, athlete performance, fan engagement, and revenue models, drawing lessons from Tokyo 2020 and Paris 2024. It highlights India's aspirations for the 2036 Olympics, focusing on opportunities to bridge socio-economic gaps and establish global benchmarks for sustainability, inclusivity, and technological advancement. By addressing challenges unique to India's socio-economic and technological landscape, the paper provides actionable insights and a roadmap for leveraging digital transformation in the context of a global mega-event. This research concludes that India's strategic adoption of digital tools can create an Olympic experience that is inclusive, efficient, and economically sustainable, leaving a lasting legacy of technological and societal progress.

RRU/BCORE/ORC/Ab/04

Safe Sport Policy Framework to Enhance Athlete Welfare and Ensure a Safe, Supportive Environment

*Dr. Vijendra Kumar Grover, Assistant Professor, Department of Sports Science and Yoga,
RKMVERI, Belur Math, Howrah, West Bengal, India*

Abstract:

The Safe Sport Policy (as advocated by the IOC and other organizations) is essential for maintaining the continued success and well-being of athletes, organizations and the wider sports community. An inclusive and protective environment for all athletes is needed to shift public expectations and encourage transparency and accountability in sports organizations and people. The guidelines for athletes of all ages, genders, abilities and backgrounds, including children, elite competitors, para-athletes, marginalized groups and at-risk populations are essential for wider acceptance of sport and maximizing their benefits to individuals and communities.

The talk will be aimed at highlighting the importance of safe sports environment for the physical and mental well-being of participants while defining different types of abuses and their prevalence in all athletic categories. Suggestions based on the cases studies and initiatives that may reduce these abuse and maltreatment experiences in sport. These strategies aim to improve participation by providing safe environment to the participants.

Additionally, the development of an inclusive Code of Conduct will be proposed, outlining commitments to behaviors that prioritize the safety and dignity of every athlete. Multilayer mechanisms for reporting and addressing incidents of abuse or maltreatment will also be discussed to ensure accountability and continuous improvement in the sporting community.

Building a Healthy Nation: The Role of Olympism in Youth Physical Education and Sports

*Dr. Munkaila Seibu, Department of Health, Physical Education, Recreation and Sports,
University of Education, Winneba, Ghana
Neeyi Akesseh Arthur, Legacy Girls' College, Akuse, Ghana*

Abstract:

The health of youth is gradually being compromised by challenges such as physical inactivity, obesity, and mental health concerns. Physical education (PE) and sports integrated with principles of Olympism, will offer a promising avenue for addressing these issues in schools. This study employs a quantitative approach to examine the practices, knowledge, and challenges of PE teachers in Senior High Schools (SHSs) in Ghana regarding the integration of Olympism into their teaching curriculum. Data were collected from 200 PE teachers using a structured survey and multistage sampling technique.

The study uses descriptive and inferential statistical methods, including chi-square tests, t-tests, ANOVA, and regression analysis, to evaluate teachers' understanding of Olympism, readiness for professional development, and barriers affecting quality PE delivery. Findings are expected to reveal key trends in PE delivery, gaps in professional competencies, and infrastructural challenges that hinder youth health promotion through Olympism-based education.

The purpose of the study is to contribute to the development of evidence-based policies to support achieving Sustainable Development Goals (SDGs) in particular SDG 3 which talked about good health and well-being), SDG 4, quality education, and SDG 10, reduced inequalities. It is envisaged that addressing these challenges and leveraging the philosophy of Olympism in implementing PE curriculum in SHSs in Ghana, will enhance the quality of PE in schools, ultimately contributing to the development of healthy, inclusive, and sustainable societies in Ghana and beyond.

Revolutionizing Evacuation Planning: Integrating Virtual Reality in Event Spaces

Mr. Aditya Chaudhary & Dr. Subhajit Bandopadhyay

Centre for Disaster Risk Reduction, School of Internal Security and SMART Policing, Rashtriya Raksha University, Gandhinagar, Gujarat, India

Abstract:

India is expected to host the most auspicious global sporting event Olympic Games in 2036. It includes a large-scale gathering of participants, staff, and spectators from across the globe that comes with the responsibility to successfully organize the event. Safety, security and preparedness at the venue plays a vital role during response in any emergency originating from either security concerns, or natural or anthropogenic hazards. Therefore, an evacuation plan is essential for ensuring the safe evacuation of people by outlining safe routes, backup routes, and minimizing panic. An evacuation map serves as a visual guide for efficient and secure movement, created through careful measurements and surveys of the event space. Now-a-days with the advancement of state-of-the-art technologies, the combination of evacuation maps with Virtual Reality (VR) technology creates a three-dimensional, realistic simulation of entire escape routes, assembly zones, obstacles allowing users to explore the environment from any direction, just like in the real world. This immersive experience makes it easier to understand, interact with, and become familiar with the event space and with the potential situation in case of any emergency. In this motivation, we integrate and transfer traditional manual evacuation plans into 3D reality with the help of VR technologies. The entire process is separated in two segments, one includes the manual measurement and mapping of potential evacuation routes and second phase includes the transformation of developed evacuation map into virtual reality through VR tool. This approach highlights the importance of upgrading traditional evacuation maps by integrating them with Virtual Reality, offering a more interactive, immersive, and effective way to navigate and understand evacuation procedures. The authors believe such technologies would be highly beneficial for evacuation planning during any global sporting event such as the Olympics.

Design Exploration of Olympic Heritage Re-licensing Model

Dr. Lin Cunzhen,

The Olympic Art and Design Research Center of CAFA (Central Academy of Fine Arts) China

Mrs. Dai Yisha, Lecturer, Beijing Institute of Fashion Technology, China

Abstract:

Beijing, as the first "double Olympic city", has accumulated rich cultural heritage. How to continuously develop and utilize Olympic legacy to play its role in promoting cities and cultural industries is an important research topic after the Olympic Games. The Legacy Strategic Approach by the IOC provides a basis for the expansion and development of the Olympic intellectual property re-licensing model.

This paper takes the Beijing 2022 Winter Olympics mascot Bing Dwen Dwen as an example, through the exploration of the Olympic intellectual property re-licensing model, and conducts continuous product design and development based on the Chinese Spring Festival culture and Zodiac culture. The continuous design and development of Bing Dwen Dwen is an active exploration of Olympic historical intellectual property rights, which has important theoretical and practical value for both the Olympic brand and the host city. From the perspective of design thinking, this paper discusses the summary of practical experience and inspiration for the future of the design and management model of Olympic cultural heritage. Through discussions at three levels, design methods, sustainable development strategies, and promoting urban cultural brands.

Keywords: *Olympic Legacy, culture heritage, re-licensing model, long term benefits*

Exploring the Hidden Truths of Olympic Games

Dr. Surya Prakash Tadeballi, Jai Surya Multiple Knowledge Development Organization and Jai Surya Global Healthcare Center, International Lobby for Critical Health Solutions, India

Abstract:

Introduction: It's no need to talk about the Olympic Games as there is competition between the youth of different countries of the world. These games tell not only about which country won them but also about why the winning country won and why the losers lost. What are the techniques of those who succeed and the pitfalls of those who fail, and what to learn and what to correct all such things are known. Participating in these games from different countries brings out the peculiarities of the customs and activities of other countries. Relationships grow, insights are revealed and it also tells how to live. But who does not fully understand how many benefits there are for the youth who participated in these important international sports. At the same time, we also need to know what benefits accrue to those who come to watch these sports. Playing games boost up immunity, longevity, prevent DNA damage and vascular disorders. **Methodology:** The physiological and psychological changes can be noticed in both youths participate in and spectators of pre and post-Olympic Games. We can assess the functions of Heart, Kidneys, Muscle and Brain by using medical equipment before and after the Games. Changes in Different thoughts and backgrounds of different countries can also be noticed. Knowing these health benefits will encourage more young people to participate in these sports. **Results:** World knowledge increases. There will be good relations developed between the countries participated. Also tells us the body symmetry of young people who participated in the sports. Also, the function of the body organs is known by using these medical devices. Because of that, it will be known whether one can participate in the respective sports or not. **Conclusion:** Unexpected health benefits have been found for both athletes and spectators improve the overall fitness and cognitive levels. Improve physical fitness and prevent mental illnesses. It is also come to know what kind of health benefits can be obtained by playing any kind of games. This will help you know exactly which games to play at which times. Seeing these sports, other countries also organize such sports in their countries accordingly, so that the youth are not only physically, mentally strong but also increases immunity and memory power. They have good relations with foreign countries and are friendly and helpful.

Olympic Economic Strategy and Technological Innovation: A Synergistic Approach to Nation Development

Ms. Dharti Savani, Assistant Professor, Madhav University, Pindwara, Rajasthan, India

Abstract:

This paper explores economic strategies and technological innovations to host the Olympics. The study also examines their collective impact on national development. The study was conducted by analyzing case studies from reports and newspapers in countries hosting the Olympics. This study shows that sports infrastructure, technology, which is constantly being innovated, and cooperation between countries encourage investment, economic growth, and new ideas. The findings of this study suggest that to maximize the long-term benefits of hosting the Olympics, it is necessary to focus on long-term strategic structures and plans. Along with this, policies, rules, and laws, economic policies, and technological advances are also considered to maximize long-term strategies.

Keywords: *Economic Strategies, Technological Innovation, Global, Synergistic*

Green Horizons: Sustainable Infrastructure Design for the Olympic Games 2036

Dr. Madhavendra Saxena, HOD, Mechanical Department, RIT Roorkee, UK, India

Abstract:

The Olympic Games present a unique opportunity to highlight sustainable development, particularly through the design and construction of hosting venues. For the 2036 Olympic Games in India, incorporating green infrastructure and sustainable design is crucial to addressing environmental, social, and economic challenges. This study investigates strategies for implementing green infrastructure and sustainable venue design, tailored to India's distinct environmental and cultural context. Core elements include energy-efficient technologies, advanced water management systems, biodiversity promotion, and waste reduction measures. The findings illustrate the feasibility of creating eco-friendly venues that align with India's sustainability objectives and global climate commitments, while leaving a lasting positive legacy for host cities.

Methodology: This research employed a mixed-methods approach to evaluate the practicality and impact of green infrastructure for the 2036 Olympic venues in India. The methods included: Literature Review: Examining global best practices from previous Olympic events, such as Tokyo 2020 and Paris 2024, to identify sustainable design strategies suitable for adaptation. Case Studies: Analyzing notable green infrastructure projects across India, including eco-friendly stadiums, public parks, and smart city initiatives, to align strategies with local conditions. Stakeholder Consultations: Conducting interviews with architects, environmental experts, urban planners, and policymakers to explore challenges and opportunities in sustainable venue design.

Results: The research produced the following key findings: Energy Efficiency: Incorporating solar panels, energy-efficient lighting, and intelligent HVAC systems could cut energy consumption in Olympic venues by up to 35%. Water Management: Implementing systems such as rainwater harvesting, greywater recycling, and permeable pavements could lower water usage by 30%, while mitigating monsoon-related flooding risks. Biodiversity Enhancement: Designing venues with green roofs, vertical gardens, and urban forests could expand green cover by 20% and support urban biodiversity.

Effect of Standing Asanas on Range of Motion and Leg Strength in Visually Impaired Individuals

Ms. Atisha Mandal, PhD Scholar, LNIPE, Gwalior, M.P., India

Abstract:

The purpose of this empirical study is to investigate the impact of standing asanas on the range of motion (ROM) and leg strength within the visually impaired population. Yoga, known for its holistic benefits, is increasingly used as a therapeutic intervention. It is used also to address the physical limitations in such special populations. Standing asanas are particularly effective in improving balance, strength, and flexibility. All of these benefits are critical for individuals with visual impairments who face challenges in terms of proprioception and coordination. This study with a six-week intervention process involves traditional standing asanas. These asanas will be performed progressively, targeting key physical variables. Data was collected at three intervals—pre-test, mid-test, and post-test. The concerned obtained data were analysed using a Multivariate Analysis of Variance (MANOVA) tool. The results indicated statistically significant improvements in ROM ($p < 0.001$). However, changes in leg strength were not significant ($p = 0.069$). These findings underscore the potential of yoga as a cost effective and accessible intervention that can further enhance physical fitness and quality of life among visually impaired individuals.

Furthermore, the progressive nature of the intervention highlights its adaptability and applicability in various rehabilitation settings. The study highlights the significance of structured yoga programs in rehabilitation. Further research in this field will help in exploring the long-term benefits and complementary strength-focused interventions. Additionally, the findings emphasize the need to design targeted strategies to improve specific fitness outcomes in this population. This study provides valuable insights for Paralympic participants, with focus on population who are visually impaired. The findings suggest that incorporating standing asanas into training regimens of such athletes can significantly enhance flexibility and range of motion, critical components for athletic performance. Improved ROM enhances physical capability and reduces chances of harm or risk of injury. This in turn enables the athletes to perform efficiently. Although the empirical study found no significant improvements in leg strength, targeted resistance training incorporated with in asanas could obtain various benefits. This improved targeted intervention strategy will offer better control, and coordination. Furthermore, the simplicity and accessibility of yoga also make it an ideal intervention technique to diverse physical training programs. Paralympic participants can optimize their performance by integrating yoga practices. It contributes to both their short-term success and long-term athletic development.

Keywords: *Standing Asanas, visually impaired, Range of Motion (ROM), Leg strength*

RRU/BCORE/ORC/Ab/13

Temporal Effect of Therapeutic Interventions on Athletes after Single Bout of Intense Exercise on DOMS

Ms. Sreelekha Das

PhD Scholar, Lakshmibai National Institute of Physical Education, Gwalior, M.P., India

Abstract:

The study aimed to find the effect of foam roller and vibration therapy on the pain tolerance level of athletes 24 hours, 48 hours, and 72 hours after a single bout of intense physical activity. The study included 20 male athletes from multiple sports disciplines who are actively practicing sports for last 2 years from LNIPE, Gwalior. The subjects were delimited to the age category from 17 to 21 years. Eight subjects received vibration therapy, while another eight received foam roller therapy immediately after exercise and rest of the subjects were in control group. The effect of vibration therapy and foam roller on athletes at different time hours was significantly correlated. The study showed that pain tolerance was better in the subjects who got vibration therapy and foam roller therapy after 24 hours, 48 hours and 72 hours than the subjects who got no interventions. Athletes and coaches should use vibration therapy and foam rollers to aid in managing the pain tolerance aspect of delayed onset muscle soreness (DOMS).

Keywords: *Delayed Onset of Muscle Soreness, Exercise Induced Muscle Damage, Foam Roller, Vibration Therapy, Pain Tolerance.*

From the Past to the Future: Environmental Legacies of the Olympic Games in a Warming World

Ms. Jayati Raval & Mr. Kunal Pandya

Manager, MI Impact Immersion, MICA - The School of Ideas Shela, Ahmedabad, Gujarat, India

Abstract:

The Olympic Games is one of the most influential mega-sports events that occurs every four years. Cities across the world are stimulated economically, socially, and environmentally through the Olympic Games. The recent Olympics in Paris in 2024 produced a carbon footprint of 1.59 million teqCO_2 , an immense 54.6% decrease in emissions compared with the London 2012 and Rio 2016 Games. However, the growing intensity of climatic change-related issues such as extreme heat brought substantial challenges to the continuous organizing of the event and, as such, increased critical concerns about the strength and sustainability of future Olympics. The study investigates Olympic environmental impacts and quantifies sustainability metrics' success and failure in response to Game-related environmental policy, practice, or innovation. This paper explains how sustainable development and legacy emerged at the Olympics. The study uses a mixed methods approach to analyse the Olympic Games' environmental legacies through secondary data. It includes historical analysis, comparative evaluation across host cities, and future impact projections using quantitative models, offering insights for climate-responsive policies. The Olympic Movement has prioritized sustainability for the last two decades. International Olympics Committee (IOC) created the Sport and Environment Commission in 1999 to support Agenda 21 for global sustainability. London created 100 hectares of the park from an industrial site in 2012. Rio 2016 restored 44 hectares of original vegetation at the golf course and 7.3 in the Olympic Park; however, the study found that while the Olympic Games have made progress in sustainability, climate change requires stronger, more adaptive policies.

Keywords: *Environment, Olympics, Carbon Emission, Government Policy, Sustainability*

Paralympic Sport and Brain Health: A Bibliometric and Systematic Analysis

Mr. Noorkalam Sekh¹ & Dr. Samiran Mondal²

Research Scholar¹, Professor²

*^{1,2} Paralympic Sport Development Cell, Department of Physical Education Sport Science,
Visva-Bharati, Santiniketan, West Bengal, India*

Abstract:

Introduction: Paralympic sports have gained global importance, providing opportunities to people with disabilities (PWD) for elite competition. These sports, however, pose significant physical and psychological challenges, including potential risks to brain health. This paper is a bibliometric and systematic analysis of recent research on brain health challenges faced by Paralympic sportspersons.

Methods: A systematic search of PubMed and Web of Science databases was conducted using keywords such as "Paralympic" AND "Sport", "Brain", AND "Health" AND. Studies focusing specifically on Paralympic sportspersons were included from PubMed total of 55 articles were collected, also by using the Web of Science also total of 29 articles were collected. Data were scrutinized through thematic analysis using the Biblioshiny App through R studio.

Results and Discussion: the researchers identified the following observations

- I. Traumatic Brain Injuries (TBI): High-contact sports like wheelchair rugby show a 22% incidence rate of traumatic brain injuries (TBI), which are a significant risk to a Paralympic sports person's brain health
- II. Mental Health Challenges: Paralympic sports person's exhibit that mental health challenges, including anxiety (35%) and depression (28%) are prevalent among athletes due to competition stress and societal

pressures.

- III. Post-Competition Transition: Paralympic sportspersons 40% of experience identity crises post-retirement, which affects overall brain health. In addition, emphasizes the need for career transition support.

Discussion: Despite these challenges, emerging therapies such as Transcranial Magnetic Stimulation (TMS) and Virtual Reality (VR) offer promising improvements in cognitive function post-TBI, with a reported 20% benefit. However, the limited availability of inclusive and impairment-specific mental health and rehabilitation programs remains a critical barrier. Collaborative efforts between healthcare providers, researchers, and sports organizations are essential to address these gaps and support the long-term brain health and well-being of Paralympic sports persons.

Conclusion: Paralympic sports promote but expose Paralympic sports persons to notable brain health risks, which need special care and further research.

Investigated the Relationship between Anthropometric Measurements and Isokinetic Strength & Power in Boxers

Ms. Sharmila. V,

Sports Biomechanist, SW-NIS Boxing Coach, Gait Analystist,

Chennai, Tamil Nadu, India

Abstract:

Introduction: In boxing, success is determined by a complex interplay of factors, including technical skill, tactical awareness, and physical attributes. While anthropometry provides information about an athlete's physical structure, isokinetic strength offers a detailed assessment of muscle function. This study investigated the relationship between anthropometric measurements and isokinetic strength and power in boxers. While both methods are used to assess boxers, the specific correlations between these measures are not fully understood, hindering effective performance enhancement and injury prevention strategies.

Methodology: This cross-sectional correlational study aimed to identify significant predictors of isokinetic strength based on anthropometric variables and discuss the practical implications for talent identification, training optimization, and injury prevention. Thirty male and female boxers participated in the study. Anthropometric data, including height, weight, arm span, body circumferences, girths, and body fat percentage, were collected by a trained anthropometrist. Isokinetic dynamometry assessed shoulder internal and external rotation, elbow flexion and extension, and core flexion and extension. Pearson correlation coefficients were used to analyze the relationships between anthropometric and isokinetic parameters.

Result: Hypothetically, positive correlations are expected between upper limb length and isokinetic peak torque in shoulder internal rotation, indicating that boxers with longer arms tend to generate more rotational force during punching.

Conclusion: This study anticipates confirming the importance of anthropometric characteristics like reach and limb length for boxing performance by demonstrating positive correlations with relevant isokinetic strength parameters. The findings will provide valuable insights for coaches and trainers to optimize training and identify talent.

Keywords: *Boxer, Anthropometry, Isokinetic, Strength*

Prognostic Dimension of Paralympic Sport in Higher Educational Institutions in India: A Critical Analysis

Mr. Narendra Prosad Mali¹ & Dr. Samiran Mondal²

Research Scholar¹, Professor²

^{1,2} Paralympic Sport Development Cell, Department of Physical Education Sport Science,
Visva-Bharati, Santiniketan, West Bengal, India

Abstract:

Introduction: Integrating the Paralympic sports ideas among the higher educational institutions in India is a critical step toward promoting equity, diversity, and empowerment for students with disabilities. This study critically examines the prognostic dimensions of Paralympic sports as a transformative framework for inclusive education by evaluating the policies, pedagogical practices, and institutional structure and for proper infrastructure for the person with a special need in higher educational institutions. Also, the researcher identified the probability of Paralympic sports to link the gaps in availability and participation.

Methodology: A comprehensive search on PubMed (18) and the Web of Science (03) database was conducted using keywords such as "Paralympic and Inclusive Physical

Education," "Paralympics and Higher Educational Institutions," Studies published between 2010 and 2024 focusing specifically on Paralympic sports on higher education institutes were included. Data were analyzed through critical analysis.

Results and Discussion: The following observations were detected from the above-mentioned studies,

1. Pedagogical Practices
2. Infrastructure
3. Curriculum
4. Societal Biases
5. Policy

Discussion: In modern higher education institutes, especially in India, there is still an incomplete area for including Pedagogical Practices, followed by inadequate infrastructure, unstructured curriculum, societal incorporation, and educational policy.

Conclusion: Paralympics can transform higher education's approach to inclusivity, fostering resilience and community development.

Keywords: *Paralympic Sports, Adaptive Sports, Inclusive Education, Higher Education Policy*

The Olympic Movement after the Paris 2024 Olympics Perfection

Dr. Mariia Bulatova, Director, Educational and Scientific Olympic Institute, NUUPES, Ukraine

Abstract:

Introduction: The Olympic movement is a grandiose phenomenon that unites the peoples of all continents, and the Olympic Games, rooted in Ancient Greece, have survived 2800 years to become an exceptional event of global scale that continues to occupy an important place in world culture. **Methodology:** The studies were conducted using the methods of theoretical analysis and generalizations. **Results:** The Paris Olympics is remembered as the "Games for a new era". One of the targets of Paris 2024 was to make it "more responsible, more sustainable and more inclusive" than previous Games. There were analyzed changes in the Olympic Games program, their organization and holding, symbols (logos, mascots, mottos, iconic posters) and rituals, ceremonies (opening and awarding), attributes (Olympic award diplomas, medals, floristry), changes in economic policy, there were also touched the aspects of the role of athletes and their entourage in Olympic sports,

women in Olympic sports, multiculturalism, Olympic culture, interaction of Olympic sports and politics. The analysis' results could serve as recommendations for the organizers of subsequent Games of Olympiads and Winter Olympics. Conclusions: In its striving to elevate the staging of the Olympic Games to the highest level, France brilliantly showcased its Olympic, historic and cultural heritage, although some Olympic rituals, ceremonies and traditions strayed from their traditional representation, which caused resonant debate among experts, the public and the press, and the elimination of which could bring the next Games an unforgettable success.

Keywords: *Olympic Games legacy, culture, heritage*

RRU/BCORE/ORC/Ab/20

Classification Considerations in Developing Musculoskeletal Testing Protocols for Para-Sports Athletes

Dr. GB Sethy, HPA (Physiotherapy)

National Classifier (Para Athletics), In-charge Sports Science, SAI, Gandhinagar, Gujarat, India

Abstract:

Introduction: Musculoskeletal (MSK) testing plays a vital role in pre-participation examinations for para-athletes. However, there is a significant lack of literature in the field of para sports. This paper aims to establish an MSK testing protocol specifically tailored to the unique classifications of para-athletes. **Methodology:** The impairment-specific MSK testing protocol included evaluations of posture, joint range of motion, muscle tone, strength, flexibility, coordination, balance, trunk control and functional tests. These assessments were conducted across various sport classifications involving 150 para-athletes, both sitting (wheelchair) and standing, from disciplines of athletics, swimming, powerlifting, fencing, table tennis and badminton. **Results:** The test-retest correlation scores were found to be high, confirming the reliability of the MSK tests. The methodologies and equipment used were demonstrated to be specific to para-sports, impairment-tailored, and reproducible. **Conclusion:** The findings of this study contribute to the development of valid and cost-effective musculoskeletal testing protocol that are specific to para sports athletes. This will also assist physiotherapists and sports science professionals in identifying risk factors, designing prevention strategies and optimizing performance within Paralympic sports.

Keywords: *Musculoskeletal Tests; Para-Athletes; Injury Prevention; Classification; Paralympic Sports*

The Soft Power of India: An Olympic Narrative

Ms. Koninika Kundu & Mr. Rasananda Panda

MICA, Ahmedabad, Gujarat, India

Abstract:

The construct of soft power centres on the effectiveness of persuasion to influence international relations, and one popular approach to the generation of soft power is hosting mega-sports events like the Olympics. Soft power employed through sports diplomacy can build image, trust, and a platform for international dialogue. However, sporting events do not always paint a rosy picture of the host country. Apathy toward morals and ethics while pursuing sports diplomacy may lead to sportswashing, and such 'Olympic Diplomacy' has led to veritable backlash and questioning of the neutrality and legitimacy of the International Olympic Committee. Increasingly, economic strains on local citizens and accusations of sportswashing of human rights issues pose problems to the Olympic Movement. Against the backdrop of these deliberations, this article aims to study India's history of sports diplomacy and the potential soft power implications of hosting the 2036 Summer Olympics.

Keywords: *Soft Power; Olympics; India; Sports Diplomacy*

Governance, Legacy, and Innovation in the Olympic Games: Shaping a Sustainable Future

Dr. Aniket A. Ambekar, Assistant Professor, School of Education, Mahatma Gandhi Antarrashtriya Hindi Vishwavidyalaya, Wardha, Maharashtra, India

Abstract:

The Olympic Games epitomize athletic excellence, global unity, and socioeconomic impact, intertwined with governance and sustainability challenges. This study explores the intricate governance frameworks of the International Olympic Committee (IOC), National Olympic Committees (NOCs), and host cities, addressing issues of transparency, inclusivity, and financial viability. It also investigates the interplay between economic strategies, technological innovation, and sustainability, emphasizing their collective role in shaping the Games. Through case studies, the research highlights successes and challenges in governance, urban development, and environmental stewardship, offering actionable insights for future host cities. Ultimately, the study calls for integrated strategies to enhance the Games' relevance, sustainability, and long-term benefits to society.

Keywords: *Governance, Legacy, Innovation, Olympic Games*

India's Quest for Hosting 2036 Olympics: Benefits, Risks and Mitigation Strategies

Mr. Nani Halyi¹ & Mr. Avinash Kharel²

*¹Department of Strength Training and Conditioning,
Rajiv Gandhi University, Itanagar, Arunachal Pradesh, India*

*²School of Physical Education and Sports,
Rashtriya Raksha University, Pasighat Campus, Arunachal Pradesh, India*

Abstract:

Background: The Olympic Games are the top international sports, uniting billions of viewers, and at the same time, it is an opportunity for the nations to express their cultural and economic strengths. Hosting such an event brings with it opportunities for economic growth, employment generation, tourism, and foreign investment. However, past host cities have been burdened with financial liabilities, unused infrastructure, and growing debts. As India is gearing to host the 2036 Olympics, this paper assesses challenges, risks, and proposes the strategies that must be in place to ensure sustainable and impactful legacy. **Methods:** This paper relies on thematic analysis to assess the preparedness of India and will provide strategic recommendations for hosting the 2036 Olympics. This paper uses the secondary data source from reports given by the International Olympic Committee (IOC), Olympic Games Organizing Committee (OGOC), articles, and research papers. It analyses recent Olympic Games using the case study method, understanding the economic, infrastructural, and governance challenges associated with hosting the event and provides actionable insights in overcoming the same. It also evaluates the economic feasibility of hosting the Olympics by comparing India's total budget and sports budget with the potential costs. **Results and Conclusion:** Hosting the Olympics can boost the economy through increased tourism and foreign direct investments, create employment opportunities, and promote urban renewal through infrastructure development projects. It also allows countries to show off their soft power and prove that they can host a world-class event, hence boosting their international identity. It also encourages greater sports participation and public health awareness. However, apart from these desirable advantages, a massive cost overruns, problems of governance, and corruption that are often coined as the white elephant phenomenon together with security questions which come hand in hand bring enormous costs in return. So, by initiating strategic planning from sustainability and green environment, thereby fostering private-private partnerships and

then governance, these risks can also be mitigated and India has a good Olympics in store after leaving a meaningful legacy.

Keywords: *Sports Governance, Sustainable Development, Economic Impact of Mega-Events, White Elephant Phenomenon, Public-Private Partnerships*

RRU/BCORE/ORC/Ab/24

‘One Size Doesn’t Fit All’: Developing a Context-Specific Coaching System for India

Dr Urvi Khasnis, PhD, HCPC Chartered Psychologist (UK),

Programme Director, MSc Performance Psychology,

Institute of Sport, P.E., & Health Sciences, Moray House School of Education and Sport,

The University of Edinburgh, Edinburgh, Scotland

Abstract:

Introduction: Traditionally, hardware (stadia/infrastructure) was considered the key to sporting success, especially at the Olympics and Paralympics. However, recently, nations have strategically shifted to focusing on liveware, specifically coaches. Despite the significant investment, the coaching system in India is often criticised. Furthermore, considering the complex composition of India, adopting a blueprint for a coaching system from another country might be particularly challenging. Therefore, this study aimed to understand perceptions of key stakeholders about the current Indian coaching system and explore context-specific solutions to develop an efficient coaching system.

Methodology: A purposive ‘elite’ sample of high-level strategic decision-makers, coach educators and high-level coaches in Indian sport were interviewed using semi-structured interviews. Participants were from ten sports that India has a good record of achievement in and/or are gaining popularity. Data were analysed using thematic analysis. **Results:** Highlighting the socio-economic disadvantages, participants criticised the currently popular preference of hiring foreign coaches and strongly emphasised the need to develop ‘quality’ home-grown coaches. Participants identified ‘quality’ coaches as those that not only have the necessary technical knowledge, but more importantly acknowledge the conditionality within coaching. Coaches having an understanding of why/why not a particular strategy can/cannot be adopted in a specific situation was identified to be particularly important for India, a unique, complex and diverse country.

Conclusions: To sum, this study highlighted the need for India to reconsider dependence on and role of foreign coaches in the country and, adopt an expertise-based (it depends on the context) approach to develop ‘quality’ home-grown coaches.

Keywords: *Indian coaching system; coach development, expertise-based approach, foreign coaches in India*

RRU/BCORE/ORC/Ab/25

The Evolution of Female Representation in the Olympics: Insights from India and Beyond

Dr. Kanishka Pandey¹ & Ms. Bhargavi Ojale²

¹Head & ²Research Assistant

Centre for Sports Research, Institute of Management Technology, Ghaziabad, Uttar Pradesh, India

Abstract:

Introduction: This study focuses on female participation in the Olympics from 1980-2024, with India at its core. It examines disparities between developed and developing nations. India has made notable strides, increasing female representation from 18 participants in 1980 to a peak of 54 in 2016, reflecting growing recognition of

women's sports. However, the decline to 45 in 2024 underscores systemic challenges. Methodology: The study employs a literature review methodology, analyzing female Olympic participation across developed and developing countries. Policies, societal attitudes, and infrastructure developments were examined to identify patterns and disparities. Key sources include official Olympic reports, policy documents and academic studies on sports and gender equity. Results: Developed nations like the USA and Australia demonstrated consistent growth in female participation, peaking at 330 and 278 athletes, respectively, due to robust policies, cultural acceptance, and substantial investments. In contrast, developing nations such as India, Kenya, and Sri Lanka face stagnation or decline, with systemic barriers. Hosting the Olympics temporarily boosted female participation in countries like Australia and Japan, but was not constant. Conclusions: The findings highlight the urgent need for targeted investments in India's sports infrastructure, gender-focused policies, and grassroots programs to sustain progress and inspire inclusivity. India's journey underscores the broader global need for equity-driven reforms to bridge disparities in female participation in sports. International cooperation and advocacy remain crucial to foster global inclusivity in sports.

Keywords: *India, Olympics, Female Participation, Gender Equity, Sports Development*

Sustainable Development

Mr. Jenil Vala, Student, AISTS India, Mumbai, Maharashtra, India

Abstract:

Introduction: Hosting the Olympic Games has become an increasingly important issue due to the considerable environmental, social, and economic impacts associated with these events. This study aims to identify and assess sustainable practices that may be incorporated into the planning and implementation of the Olympics, thus improving their overall sustainability.

Methodology: This study uses a case study research design to analyze data from the last four Olympic Games in which the applications of sustainability were recorded. The analysis includes the review of planning documents, sustainability reports, and environmental impact assessments published by the organizing committees. Interviews with major stakeholders involved in sustainability activities of these Games are also included in the research. The methodological focus is set on comparison to assess the effectiveness of different sustainability programs. **Result:** Findings indicate that the use of renewable energy sources, waste reduction programs, and sustainable transportation has greatly reduced the carbon footprint of the Games; however, it depends on the level of stakeholder engagement and commitment to sustainability by the local government. **Conclusions:** The research will provide evidence that integrating sustainable practices in the Olympic Games not only minimizes the impact of environmental degradation but also creates significant social and economic benefits for the host community. In addition, the study calls for the inclusion of a broad sustainability framework within the planning process of future Olympic Games from their inception to guarantee stakeholder participation and consistency with overarching global standards of sustainability.

Keywords: *Sustainability in Olympic Games, Environmental Impact, Stakeholder Engagement, Sustainable Practices*

Strategic Economic Solutions for the Challenges of Hosting the Olympics

Mr. Chanderkant Dhiman¹, Dr. B. C. Kapri², Dr. Mahendra Pratap Gaur³

^{1,2}Research Scholar & Senior Professor, Department of Physical Education,
Banaras Hindu University, Varanasi, Uttar Pradesh, India

³Associate Professor, Indira Gandhi National Tribal University, Amarkantak, Madhya Pradesh, India

Abstract:

Background: The Olympic Games represent a global celebration of sportsmanship and unity among nations. Over the years, hosting this prestigious event has become increasingly challenging due to financial, social, and political complexities. Many cities view it as an opportunity to gain international visibility, boost the economy, and improve urban infrastructure. **Methods:** This research employs a qualitative method, including case studies and comparative evaluations, to examine the economic and social effects of organizing the Olympics. Data was gathered through interviews with relevant stakeholders, as well as reviews of historical documents, scholarly articles, and reports from the International Olympic Committee. The study highlights aspects such as infrastructure improvements, revenue allocation, and sustainable hosting practices. **Results:** The findings indicate that hosting the Olympics is frequently associated with substantial budget overruns, with an average increase of 150%. For instance, the 2014 Sochi Olympics exceeded its budget by 289%, while the 2016 Rio Games surpassed it by 352%. Key contributing factors include high infrastructure costs, security measures, and inefficient financial management. While short-term benefits, such as increased tourism and job creation, are often highlighted, they tend to be overestimated, leaving host cities with minimal long-term economic advantages. Emotional benefits, such as fostering national pride and unity, are significant but insufficient to offset the financial drawbacks. **Conclusion:** Adopting sustainable practices—such as reusing existing facilities and promoting financial accountability—is crucial for minimizing risks. Integrating the Olympics with broader development goals and exploring alternative hosting models can make the event more inclusive, feasible, and enduring.

Integrating Virtual Reality in Paralympic Sport Events for Enhancing Performance and Fan Engagement

Mr. Souradeep Das¹ & Dr. Samiran Mondal²

MPed Student¹, Professor²

^{1,2} Paralympic Sport Development Cell, Department of Physical Education Sport Science,
Visva-Bharati, Santiniketan, West Bengal, India

Abstract:

The rapid integration of technology in the sports industry has reshaped performance and fan engagement, with Virtual Reality (VR) emerging as a transformative tool for creating immersive experiences. Despite its potential, the application of VR in para sport events, such as the Olympics and the Paralympics, remains under-explored, particularly in terms of its scalability, accessibility, and impact on performance and fan engagement. Addressing this gap is crucial as VR can redefine how it interacts with sports, providing personalized and interactive experiences that bridge social and economic divides.

This study aims to investigate how VR can be effectively integrated into Paralympic sports events to enhance performance and fan engagement. A quantitative and qualitative research design was employed, combining a review of existing literature and analysis of case studies from past events that incorporated VR technologies. The

findings reveal that VR enhances performance and fan experiences through immersive viewing, interactive features, and emotional engagement. Additionally, it offers significant opportunities for revenue generation through innovative sponsorship activations, while challenges such as cost, accessibility, and infrastructure require targeted strategies.

The study contributes theoretically by expanding the understanding of VR's role in para sports consumption and highlighting its potential to transform traditional performance and fan engagement models. From a managerial perspective, the research provides actionable insights for event organizers, sponsors, and technology providers, outlining strategies to overcome technological and logistical barriers. These findings emphasize the importance of leveraging VR to create inclusive, engaging, and profitable para sports events.

Keywords: *VR (Virtual Reality), Paralympic, Olympics, Performance, Fan Engagement*

Integrating Olympic Values in Grassroots Sports Development: The Kreedakul Program Experience

Dr. Anand B. Lunkad¹, Mr. Nikhil Sonone² & Mr. Sankalp Thorat³

*¹Director of Physical Education and Sports, ²Head Coach Track and Field & ³Program Manager,
Grassroots Kreedakul Program, Jnana Prabodhini Kreedakul, Pune, Maharashtra, India*

Abstract:

Integrating Olympic values into grassroots sports programs fosters holistic development, youth empowerment, and community engagement. This study focuses on the Kreedakul Program's application of Olympic values—excellence, friendship, and respect—across urban and rural contexts in Maharashtra India. Jnana Prabodhini Kreedakul, an urban hub, emphasizes structured training and competitive excellence, while the Grassroots Kreedakul (with Tata Trusts) initiative adapts these principles to rural settings, fostering inclusivity and resilience. The program involves 1,156 participants, including 32% girls, and demonstrates how grassroots sports can bridge socio-economic and cultural divides. Utilizing a hub-and-spoke model, it ensures widespread participation while integrating life skills, gender equity, and community-driven development. By promoting teamwork, discipline, and leadership, the program not only enhances athletic performance but also prepares participants for success beyond sports.

This descriptive case study is based on interviews with coordinators, participant feedback, and life skills interventions and life skill tests. Key outcomes include improved physical fitness, social cohesion, and gender equity, with significant participation from rural areas. The hub-and-spoke model ensures inclusivity and fosters leadership development alongside sports training.

The Kreedakul Program underscores the transformative potential of Olympic education in building sustainable sports ecosystems. By integrating Olympic values, the program fosters well-rounded individuals, promotes social cohesion, and bridges social divides. This study highlights its success in creating a supportive environment for holistic youth development, setting a benchmark for community-driven grassroots sports initiatives.

Keywords: *Olympic values, grassroots sports, Kreedakul Program, inclusivity, community development, Hub and Spoke Model*

Reviving Hockey in India through the Impact of Odisha's Governance Model and Collaborative Efforts by Different Stakeholders

Mr. Vikas Singh, Ph.D. Scholar,

Lakshmibai National Institute of Physical Education, Gwalior, Madhya Pradesh, India

Abstract:

Hockey in India has experienced a spectacular recovery in recent years. Looking at recent Indian history, hockey is recovering at lightning speed, and this is largely contributed to by various stakeholders, including private partners, national sporting organisations, and state governments. Numerous states are coming to the aid of infrastructure, Odisha being one of them in sponsorship, which has sponsored all the way from the grassroots to long-term infrastructure, which is a co-gathering on hockey's resurrection in India, particularly the efforts put forward by Odisha's leadership in terms of governance. The state's role in regional sports development includes sports complex construction, youth programming, and hosting international events. This study examines the collaborative efforts that have propelled the expansion of hockey in India, focusing on Odisha's innovative governance approach. Key areas of discussion include state initiatives, such as the construction of world-class facilities, investment in youth development, and the state's active role in hosting international tournaments. At the national level, the role of Hockey India, the Sports Authority of India (SAI), and government policy support were examined. This research also examines the impact of worldwide exposure through global events and the importance of high-performance coaching. In view of the approach taken in Odisha, India is able to showcase the care and development of such states with the aim of further contributing to the development of sports in India as well as to strengthen international status.

Keywords: *Hockey in India, Odisha governance, sporting organization.*

Data-Driven Frameworks for Effective Sports Advertising: Bridging Creativity and Analytics

Mr. Ashutosh Dutt¹ & Mr. Suraj Nandi²

¹*Associate professor, Data science and business analytics, MICA, Ahmedabad, Gujarat, India*

²*PGDM, MICA, Ahmedabad, Gujarat, India*

Abstract:

Sports advertising for events like Olympics requires innovative, data-driven strategies to connect with diverse audiences and maximize returns. This study bridges creativity with analytics by developing predictive frameworks to help brands and sports organizers craft meaningful, consumer-relevant advertisements.

The methodology involves compiling a database of 3,500 award-winning and nominated advertisements, spanning six years across categories. Detailed descriptions, including transcripts, are documented. Using Python-based BERT, and manual verification, these descriptions are classified into themes and emotions identified by two leading market research agencies. The classified data is analysed to uncover recurring patterns of themes and emotions in successful advertisements. A strategic framework is next developed specific to categories, to guide brands in creating impactful commercials aligned with consumer expectations.

A machine learning model is being trained on these ads to classify new advertisements, leveraging identified patterns. The model will predict ad effectiveness based on themes and emotions, by uncovering patterns.

The analysis for sports category, covering 400 recognised and award-winning sports-based commercials by brands and organisers, including the Olympics, NFL, UEFA, NBA, and IPL, is completed. Key themes and emotions identified include “Aspirational and Focused” storytelling, “Humorous and Fun-Loving” engagement, and “Real-Life Situations and Relatability”. Emotional triggers like “Sentimental and Sensitive” narratives and “Dynamic and High-Energy Action” visuals resonate strongly. Value-driven messaging emphasizing “Health-themes” and “Athlete endorsements” further amplifies impact.

Furthermore, the model being trained, in the sports category, will help brands and organisers evaluate ad descriptions, ensuring relevance, scalability, and audience engagement, pioneering a transformative approach to sports brand communications.

RRU/BCORE/ORC/Ab/32

Integrating Physiotherapy into Olympic Hosting: Injury Prevention and Management Strategies

*Dr. Mumux Mirani, Assistant Professor, Department of Musculoskeletal & Sports Physiotherapy,
SPB Physiotherapy College, Veer Narmad South Gujarat University, Surat, Gujarat, India*

Abstract:

Introduction: The Olympic Games bring together elite athletes who must perform under intense physical and mental demands, increasing their risk of injuries. Physiotherapy plays a critical role in reducing these risks, optimizing performance, and facilitating recovery. This study investigates the integration of physiotherapy into Olympic hosting, emphasizing its role in injury prevention, acute care, and rehabilitation.

Methodology: A descriptive research design was utilized, drawing from peer-reviewed literature, case studies from recent Olympic Games, and official reports from organizations like the International Olympic Committee (IOC). Thematic and comparative analyses were conducted to evaluate sport-specific injury patterns, physiotherapy interventions, and the role of emerging technologies such as wearable devices and AI-driven rehabilitation systems.

Results: Findings revealed that common injuries in the Olympics include sprains, fractures, tendinopathies, and heat-related conditions. Physiotherapy interventions, such as pre-event screenings, personalized conditioning programs, and on-field acute care, significantly reduce injury incidence and recovery time. Advanced rehabilitation technologies were identified as critical for enhancing athlete outcomes. Challenges, including logistical constraints, cultural diversity, and resource disparities, underline the need for standardized physiotherapy protocols and multidisciplinary collaboration.

Conclusion: Integrating physiotherapy into Olympic hosting ensures comprehensive athlete care, reduces injury risks, and supports recovery, ultimately enhancing the success of the Games. Recommendations include embedding physiotherapy in planning committees, training therapists in sport-specific techniques, and leveraging innovative tools for prevention and recovery. This framework advocates for physiotherapy as an essential element in creating a safe and high-performing Olympic environment.

Keywords: *Physiotherapy, Olympic Games, injury prevention, athlete care, rehabilitation, performance optimization*

Unveiling Employment Opportunities in the Olympics Ecosystem: A Pathway to Economic Growth and Skill Development in India

Ms. Aashna Rajput¹, Mr. Ashish Jasrotia², Ms. Manpreet Kaur Kalra³

^{1,2}Research Scholar, Lakshmibai National Institute of Physical Education, Gwalior, M.P., India

³Research Scholar, Indira Gandhi Institute of Physical Education & Sports Sciences, Delhi, India

Abstract:

The Olympic ecosystem encompasses a wide range of activities, ranging from sports management and event planning to infrastructure development and media broadcasting. The descriptive study explores employment opportunities within the Olympic ecosystem and its impact on economic growth and skill development in India. India can create significant jobs in sectors such as hospitality, tourism, logistics and technology using the global appeal and organizational complexity of the Olympic Games. The study explores the current state of India's sports infrastructure, workforce readiness, and government initiatives aimed at promoting sports and related industries. It also examines case studies from countries hosting the Olympic Games to highlight best practices in labour participation and economic development. In addition, research identified gaps in skill development and proposed strategies for aligning India's workforce capabilities with the requirements of the Olympic ecosystem. Through a multidisciplinary approach, the study focuses on the role of the Olympic Games as a catalyst for innovation, entrepreneurship and social inclusion. It emphasizes the need for a policy framework that integrates sports with education, vocational training and industrial cooperation. The conclusions are intended to inform stakeholders about the potential of the Olympics to stimulate economic growth and to increase India's global presence in the sports arena.

Keywords: *Entrepreneurship, Global Sports, Logistics, Olympic Ecosystem, Workforce Readiness*

Strategies to Enhance India's Olympic Performance Through Global Policy Insights: From 7 to 70

Mr. Sangey Tsering

Assistant Professor, Faculty of Physical Education and Sports Sciences,
Rajiv Gandhi University, Arunachal Pradesh, India

Abstract:

India has great potential to succeed in international sports, especially at the Olympics, given its 1.5 billion people. The nation hasn't been able to match the success of other powerful countries, though, despite its enormous talent pool. India could improve its Olympic performance by taking inspiration from the best-performing countries' sports policies. This assessment analyses the Olympic performance of Indian athletes. In order to determine the main strategies and initiatives that have driven their Olympic success, this research examines the sports systems of nations such as the US, China, the UK, Japan, and France and the review has identified the key strategies and programs that have fuelled their Olympic achievement. By examining aspects such as grassroots sports development programme and development, elite athlete training, infrastructure development, Sports sciences and effective governance and implementation of sports policy, this paper offers practical recommendations to guide India toward becoming a top Olympic performer in the years ahead.

Keywords: *Olympic Performance, Sports Policies, Grassroots Sports, Governance and implementation*

Avoiding White Elephants in Olympic Games: Lessons for India's 2036 Olympic Bid from Past Hosts

Ms. Kapi Sonowal¹, Dr. Manoj Sahu²

¹PhD Scholar & ²Assistant Professor

Department of Physical Education Pedagogy, LNIPE, Gwalior, M.P., India

Abstract:

Hosting Olympic Games is a prestigious privilege for cities but leaves many underutilized infrastructures or "white elephants" that later become burdens to the city, suggesting their inefficiency. Managing legacies will indeed have divergent outcomes in Athens 2004, Sochi 2014, Rio 2016, and London 2012. It addresses the white elephant phenomenon and strategizes recommendations toward supporting India's prospective bid to host the 2036 Olympics and ensure long-term viability and benefits for the community.

Methodology: The research employs a comparative analysis framework, which analyzes and compares the plans, delivery, and after-Games legacy management of Athens, Sochi, Rio, and London's venues. A combination of peer-reviewed literature and official reports, and key areas focused on legacy planning, stakeholder engagement, integration into the city, and scaling up of infrastructures, led to the consideration of each case in terms of success or failure in keeping the Olympic infrastructure useful after the games.

Results: Athens and Rio struggled with abandoned venues and poor legacy planning. The venues of Athens were deserted due to over-investment and inadequate post-Games strategies. In the case of Rio, maintenance and usage of the infrastructure were problems for it due to political and economic instability. In the case of Sochi, high investments created very limited usage of facilities, further straining the financials of the region. London did show a perfect example of embedding legacy planning from the very bidding stage. The city adopted temporary structures, converted venues for community use, and integrated facilities into its urban fabric, thus minimizing financial risks and maximizing public benefit. Some of the key successes included the conversion of the Olympic Stadium into a multi-use venue and the regeneration of East London into a thriving urban hub.

Conclusion: For India's hypothetical 2036 bid, it is imperative to emphasize the integration of legacy planning, multi-use infrastructure, and urban integration right at the outset. Temporary or modular venues, public-private partnerships, and engaged communities are necessary strategies. Additionally, integrating Olympic projects into smart city or urban development programs helps ensure that the infrastructure is sustainable and meets the longer-term goals of the city over and above the Games. Through the lessons drawn from Athens' and Rio's failures and adjusting London's success to its particular socio-economic setting, India will be able to craft a sustainable Olympic legacy that shuns the failures of white elephants and delivers the best benefits for its citizens.

Keywords: *Olympic Games, White Elephants, Legacy Planning, Sustainable Infrastructure, India 2036*

Building Public Trust in Olympic Governance: The Role of Transparency, Stakeholder Engagement, and Ethical Decision-Making in Strengthening Institutional Integrity

¹Mr. Surendra Meena, ²Dr. Manoj Meena

¹Assistant Director, Department of Physical Education, University of Rajasthan, Jaipur, Rajasthan, India

²Assistant Professor, Department of Law, University of Rajasthan, Jaipur, Rajasthan, India

Abstract:

Public trust and stakeholder engagement are crucial elements in the governance of Olympic institutions, particularly in ensuring the legitimacy, sustainability, and ethical integrity of the Olympic movement. This paper explores how Olympic institutions, such as the International Olympic Committee (IOC), maintain and build public trust through transparent communication, inclusive decision-making, and ethical governance. It examines the role of transparent communication in fostering accountability, the mechanisms by which Olympic institutions engage diverse stakeholders—including athletes, local communities, and sponsors—and the ethical frameworks that guide decision-making processes within the Olympic movement. The paper also highlights case studies, such as the Salt Lake City 2002 corruption scandal and the Tokyo 2020 Olympics, to demonstrate how Olympic organizations have responded to challenges in maintaining trust and credibility. Drawing on these insights, the paper offers recommendations for enhancing transparency, increasing stakeholder involvement, and reinforcing ethical standards to further strengthen public trust in the Olympic Games. Ultimately, the research underscores the importance of ethical behaviour and open engagement in securing the long-term success and integrity of the Olympic movement.

Discourse on India's Anti-Doping Framework: Challenges for Hosting the 2036 Olympics

*Mr. Abhijay, PhD Scholar, Department of Social Sciences and Humanities,
Indraprastha Institute of Information Technology, Delhi, India*

Abstract:

India's bid to host the 2036 Olympics presents a heartwarming picture of the country's deeply tied history of sports culture and a display of its soft power. Hosting the Olympic Games provides opportunities and challenges that ripple effect on the host nations' socioeconomic systems. The present study aims to address one of the key challenges of managing anti-doping systematics at different levels of operation during the games' tenure. In the past few years, India has been a top contender amongst the nations with the highest number of anti-doping rule violations (ADRVs). There have been serious questions on the underperforming nature of the National Anti-Doping Agency (NADA) and the rise in the number of doping cases that have found roots at the junior level. Hosting the Olympic Games is not solely about sustainable and technological innovations but also about managing anti-doping across the hierarchy, which forms an integral part of the games. Every participating athlete and athlete support personnel are under the purview of the world anti-doping norms and laws, and to maintain the efficiency and governance of the anti-doping system, a trained pool of specialists is required to ensure the smooth conduct of the games. At this juncture, the study aims to consider the potential challenges associated with the current anti-doping structure in India and generate a discourse for upscaling the anti-doping dynamics. It attempts to bring a collaborative structure to the action of scholars, academics, and anti-doping agencies to present India as a leading power in anti-doping testing and governance.

Keywords: *Anti-doping, NADA, Governance, Athletes*

Comparative Analysis of Venue Master Planning: Brisbane 2032 and India's Preparation for the 2036 Olympics

Mr. Shubham Dhaka¹, Dr. Manoj Sahu²

¹PhD Scholar, Department of Physical Education Pedagogy, L.N.I.P.E., Gwalior, M.P., India

²Assistant Professor, Department of Physical Education Pedagogy, L.N.I.P.E., Gwalior, M.P., India

Abstract:

The Brisbane 2032 Olympics set quite a high standard with its planning and execution, and valuable lessons can be garnered for a potential Indian bid for the 2036 Olympics. Venue planning is at the heart of ensuring cost-effectiveness, sustainability, urban development, and legacy after the games. Brisbane's approach falls in line with the IOC's new approach that focuses on utilizing existing infrastructure, compact venue clusters, and harmonization with urban development plans. This study will compare Brisbane's master plan with India's current and planned infrastructure to find ways to best adapt India's preparation for the bid while trying to overcome the country's specific issues.

Methodology: Comparative research design, examining the official IOC documents, government reports, and academic literature pertaining to Brisbane's 2032 venue master plan and India's existing sports infrastructure. Key metrics used are the average travel time between venues, compact venue cluster distribution, and venue planning aligned with long-term urban development strategies. The analysis focuses on evaluating the potential venue clusters in Indian cities such as Delhi-NCR-Agra and Ahmedabad.

Results: Brisbane venue master plan features a compact zone strategy with three predominant clusters, namely, Brisbane, Gold Coast, and Sunshine Coast, which are connected with advanced transport infrastructure that ensures an average 19 minutes traveling time for athletes. The plan also integrates venues with existing urban infrastructure and comes with a community-oriented legacy use concept. By contrast, India has a good basis of existing venues in the cities of Delhi and Ahmedabad, but its challenges in fragmented planning, poor transport connectivity, and legacy integration are issues it needs to overcome. The study concludes that if India's initiatives in urban development align with Olympic planning, then it can plug such gaps very effectively.

Conclusion: Brisbane's approach to compact venue zones, sustainable transport systems, and legacy-driven planning is something India should adopt. It will help the country make a strong bid for the 2036 Olympics by building on the infrastructure already available, improving connectivity, and ensuring venue planning integrates well with overall development goals. This study concludes that venue master planning should align with national urban initiatives to achieve the maximum benefits for long-term results and a successful Olympic legacy.

Ethical Governance and Transparency in Olympic Institutions

Dr. Jaidev Desai

*Assistant Professor, Department of Advance Training and Coaching,
Swarnim Gujarat Sports University, Vadodara, Gujarat, India*

Abstract:

Introduction: The Olympic Games stand as a global symbol of unity, excellence, and fair competition. However, the integrity of these ideals heavily relies on the governance structures underpinning the International Olympic Committee (IOC) and associated institutions. Ethical governance and transparency are not merely aspirational goals but essential components for maintaining public trust, fostering inclusivity, and ensuring equitable management of resources. This paper explores the ethical challenges faced by Olympic institutions, including corruption, lack of stakeholder engagement, and decision-making opacity. Through an analysis of governance frameworks, case studies, and comparative insights, the study identifies gaps in current practices and proposes actionable strategies for improvement. The research underscores the importance of embedding ethical principles in institutional operations, advocating for enhanced accountability, diversity, and stakeholder inclusivity to uphold the Olympic ideals. By addressing these governance concerns, the Olympic Movement can secure its legacy as a force for positive global change. **Summary:** This research examines the ethical challenges and transparency issues within the governance of Olympic institutions, particularly the International Olympic Committee (IOC). It highlights key concerns such as corruption, lack of stakeholder engagement, and opaque decision-making processes. By analyzing governance frameworks and case studies, the study identifies gaps in current practices and proposes actionable strategies to enhance accountability, diversity, and inclusivity. The paper emphasizes the importance of embedding ethical principles into institutional operations to uphold the Olympic ideals of fairness and integrity, ultimately reinforcing the credibility and legacy of the Olympic Movement.

Evaluating the Economic, Social, and Cultural Impacts of Past Olympic Games on Host Countries

*Mr. Hrishabh Khandelwal & Mr. Pranav Singh
Research Scholar, LNIPE, Gwalior, M.P., India*

Abstract:

This research paper evaluates the multifaceted impacts of the Olympic Games on host countries, focusing specifically on the last five Summer Olympics: Beijing 2008, London 2012, Rio de Janeiro 2016, Tokyo 2020, and Paris 2024. The study delves into various economic effects, such as the influx of tourism revenue, significant infrastructure development, and job creation that typically accompany these global sporting events. However, it also considers the social and cultural dimensions, examining how the Olympics fosters national pride, enhance community cohesion, and promote cultural exchange among diverse populations. Through a comprehensive analysis, this research provides a nuanced understanding of both the benefits and challenges that host nations encounter. It highlights how these impacts vary across different contexts, shedding light on the unique experiences of each host country. Additionally, the study draws lessons for future Olympic hosts, particularly focusing on India as it contemplates its potential bid for the Games. By exploring these dimensions, this research contributes meaningfully to the ongoing discourse surrounding sustainable practices and inclusive policies in

organizing mega-events like the Olympics. Ultimately, it illuminates how such events can leave a lasting legacy that transcends mere economic gain, fostering social unity and cultural enrichment for generations to come. In conclusion, the analysis reveals that hosting the Olympic Games generally yields positive economic impacts, including job creation and tourism growth, alongside beneficial social and cultural effects, with minimal downsides when events are planned and managed effectively.

Regulating Fairness: Legal Challenges of Inclusion for Athletes with Intersex Traits or Gender Variance in the Olympics

Dr. Manoj Meena

*Assistant Professor, Department of Law,
University of Rajasthan, Jaipur, Rajasthan, India*

Abstract:

The intersection of gender identity, biological diversity, and competitive fairness has become a contentious issue in international sports, particularly in the Olympic movement. Recent controversies, including the implementation of testosterone regulations by World Athletics, have sparked debates over the inclusion and equitable treatment of athletes with intersex traits or gender variance. These regulations, aimed at ensuring a level playing field, have faced criticism for disproportionately impacting athletes from the Global South, particularly women of color, raising questions about systemic bias and cultural insensitivity. This paper uses doctrinal research methodology to examine the legal and ethical dimensions of these regulations through a critical analysis of key cases, such as Caster Semenya's challenge to the World Athletics' policy at the Court of Arbitration for Sport (CAS) and subsequent appeals at the Swiss Federal Tribunal. It explores the interplay between international sports law, human rights principles, and medical ethics, focusing on how these regulations align—or conflict—with the Olympic Charter's commitment to diversity, equity, and inclusion. Furthermore, the paper highlights the broader implications for athlete autonomy, bodily integrity, and the potential stigmatization of athletes with atypical biological traits. Drawing on comparative legal frameworks and international human rights treaties, it provides recommendations for fostering a more inclusive and equitable approach that balances fairness in competition with respect for diversity. By interrogating these issues, the paper seeks to contribute to ongoing discussions on achieving inclusivity in global sports while preserving the integrity of competitive fairness.

Keywords: *Gender Identity, International Sports Law and Human Rights, Inclusion and Olympics, Systemic Bias and Cultural Insensitivity*

RRU/BCORE/ORC/Ab/42

Ethical Governance and Transparency in Olympic Institutions

Ms. Nishtha Agrawal

Assistant Professor, Auro University, Surat, Gujarat, India

Abstract:

The Olympic Movement represents a global platform for promoting values of excellence, respect, and fair play. However, the governance of Olympic institutions has been subject to scrutiny over issues of corruption, lack of transparency, and ethical lapses. This research explores the challenges and opportunities for fostering ethical governance and transparency within these institutions. Using a multidisciplinary approach, the study examines the principles of good governance, the effectiveness of existing regulatory frameworks, and the impact of public

and stakeholder trust on the integrity of Olympic organizations. Case studies of recent scandals and reforms are analyzed to identify systemic vulnerabilities and best practices. The paper advocates for enhanced accountability mechanisms, stakeholder inclusivity, and the adoption of technology to ensure transparency. By aligning their governance structures with the highest ethical standards, Olympic institutions can safeguard their credibility and reaffirm their role as champions of integrity in global sports.

Munich and Seoul Olympic Games: Politics and Sport in Divided Nations

Mr. Yoonkyu Song

Willibald Gebhardt Institute, University of Münster, Germany

Abstract:

Introduction: This study critically examines the impact of the 1972 Munich Olympics and the 1988 Seoul Olympics—unique sporting events held in divided nations during the Cold War—on their respective societies and sport structures. It aims to compare sport political challenges in both parts of Germany and Korea, and will contribute to the identification of future challenges to host the Olympics in other countries. **Methodology:** The paper reviews original documents (e.g. official reports, bulletins, journals, memoirs, interviews, books, etc.) of positive and negative effects of bidding, preparing, and execution of the Munich and Seoul Games. **Results:** West German and South Korean authorities employed diplomatic strategies to secure a national leading position (against their national counterparts, the East and the North) within the Olympic movement. They pursued performance enhancing policies on different levels and the renewal of national sport and political images. **Conclusion:** Hosting the Olympics in both countries served as key events that catalyzed national development and the evolution of sport systems amidst competition with their divided counterparts. The analysis of the two Olympics and their associated national policies provides an opportunity to invigorate discussions on the significance of the Olympics in the contemporary international landscape, characterized by political instability due to wars and regional conflicts. Furthermore, it invites reflection on the role of the IOC in addressing these issues.

Case Study: Sustainability of TATA Mumbai Marathon

Amitava Pal¹ and Avanti Desai²

¹Associate Dean, and ²Program Head,

International Institute of Sports & Management, Mumbai, Maharashtra, India

Tata Mumbai Marathon is one of the best examples by which large sport events can deliver sustainability so that it improves the environment besides positive impacts on social life. Since its inception in 2004, TMM has been doing waste reduction through reuse and recycling processes and composting. For which, in 2022, TMM bagged the 'Best Solid Waste Management Program' award for its models of sustainable waste management. TMM has collaborated with Municipal Corporation of Greater Mumbai (MCGM), Hasiru Dala Innovations, and Stree Mukti Sanghatana to manage the waste as well as to support the waste pickers. Some of the significant initiatives undertaken by TMM are online registration in order to minimize the usage of paper, plastic-free bib distribution so that participants come with their own bottles and save on plastic, leftover water for irrigation purposes, and ensuring that all types of waste be recycled or composted. The rest of the food is redistributed to the needy through organizations like Roti Bank. The marathon also encourages sustainable transport by using public transportation, carpooling, and bicycle stands for participants. This case study can serve as a model for the organization of such massive events in the future. The sustainability strategies of TMM in waste reduction, water

conservation, recycling, and eco-friendly transport can be replicated in similar events. This would certainly reduce their negative environmental impacts. Event organizers may adopt such practices under a holistic sustainability framework for their events in such a manner that stewardship of the environment is always integrated with social responsibility. When India is aiming to host 2036 Olympics, the model framework of TMM can be a great benchmark to follow. This will not only showcase athletic excellence, but this will highlight India's commitment towards sustainability goals and its vision towards greener future as well.

Road to Glory: A Predictive Approach to Targeting Gold for India's Success in the 2036 Olympics

¹Ms. Sangita Kumari Roy, Research Scholar, Guru Ghasidas Vishwavidyalaya, Bilaspur, Chhattisgarh, India

²Prof. Vishan Singh Rathore, Guru Ghasidas Vishwavidyalaya, Bilaspur, Chhattisgarh, India

Abstract:

The ambition for India to achieve a prominent position in the global sporting arena is set against the backdrop of its bid to host the 2036 Summer Olympics. This paper presents a comprehensive strategic framework to enhance India's prospects for winning gold medals through a targeted approach focusing on specific sports. Utilizing predictive analytics, we analyze historical performance data, current talent pools, and global trends to identify high-potential sports for prioritization. By emphasizing sports such as athletics, wrestling, badminton, shooting, and hockey, the study seeks to establish a roadmap that includes infrastructure development, athlete training, coaching enhancements, and the integration of sports science.

Furthermore, we explore funding mechanisms, grassroots initiatives, and competitive environments essential for fostering a thriving sports culture. Through a detailed examination of successful international models, this research aims to provide actionable insights that can facilitate India's transition from a potential medal contender to a powerhouse, securing its place within the top ten nations in the Olympic medal tally. The findings underscore the importance of strategic investments in sports development and the role of data-driven decision-making in achieving Olympic glory.

Does Olympic Infrastructure Drive Future Performance? A Global Comparative Study

Ms. Jahnvi Shah, Ms. Paahini Agarwal, Mr. Shreyas Walekar, Prof. Ashutosh Dutt

MICA, Ahmedabad, Gujarat, India

Abstract:

Introduction: The Olympic Games offer host nations an opportunity to enhance their sports infrastructure, but the long-term impact of these investments on athlete performance remains underexplored. This study examines whether hosting the Olympics leads to sustained improvements in athlete performance in subsequent global sporting events. The research evaluates data on medal tallies, qualification rounds, and athlete participation in events such as the World Championships and Commonwealth Games, focusing on Games hosted after the 1994 Olympic Charter revision, which formalized legacy planning strategies.

Methodology: A multivariate analysis was employed to identify statistically significant relationships between Olympic hosting and post-event athlete performance. Findings reveal that while some countries experience

marked improvements in performance metrics, these effects are highly contingent on the extent of infrastructure investments and athlete training programs.

Results/Conclusion: The study highlights the broader implications of hosting mega-events for sports development and provides a data-driven framework for understanding how nations can capitalize on Olympic investments to create enduring legacies.

Globalizing the Games: The Role of Emerging Sports in Shaping the Olympic Legacy

Ms. Jahnavi Shah, Ms. Paahini Agarwal, Mr. Shreyas Walekar, Prof. Ashutosh Dutt

MICA, Ahmedabad, Gujarat, India

Abstract:

Introduction: The Olympic Games reflect evolving global trends, with the inclusion or exclusion of sports shaping the Games' legacy. This study investigates the historical rationale behind these decisions, analyzing examples such as cricket, baseball, karate, and tug-of-war. Employing a mixed-methods approach that integrates policy evaluations, IOC decision analyses, and empirical viewership data, the research explores factors influencing sport inclusion, including global participation, cultural representation, and competitive equity. **Methodology:** A mixed-methods approach was employed, combining policy analysis of IOC decisions, viewership trends, and athlete participation data. This research also explores the potential impacts of including emerging sports like cricket and kabaddi, particularly with cricket's anticipated return in the 2028 Los Angeles Games. **Results/Conclusion:** Findings may highlight that strategic inclusion of regionally popular sports can enhance athlete participation and global viewership while aligning with the Olympic Charter's emphasis on inclusivity and cultural exchange. Emerging sports trends, if integrated effectively, can sustain the relevance of the Games for diverse audiences worldwide. The study might provide actionable recommendations for aligning sport inclusion with societal and regional dynamics, offering stakeholders a roadmap to modernize the Olympic program while honoring its traditions.

Securing the Flame: Terrorism, Crime, and the Evolving Security Dynamics of the Olympic Games

Ms. Jahnavi Shah, Ms. Paahini Agarwal, Mr. Shreyas Walekar, Prof. Ashutosh Dutt

MICA, Ahmedabad, Gujarat, India

Abstract:

Introduction: The Olympic Games, symbolizing global unity, have frequently been targeted by acts of terrorism and crime, raising pressing concerns about security. This study examines historical incidents, such as the 1972 Munich Massacre, the 1996 Atlanta bombing, and threats during the 2008 Beijing and 2014 Sochi Games, to understand their socio-political contexts and security implications. **Methodology:** A multi-method approach, including case studies and policy analysis, was used to explore how host nations have adapted to evolving threats through surveillance technologies, counterterrorism units, and international intelligence-sharing frameworks. Emerging challenges such as cyberterrorism and AI-driven threat detection were also analyzed. **Results/Conclusion:** Findings may underscore the importance of robust security measures in safeguarding mega-events. The study will provide recommendations for future host nations, particularly for the 2024 Paris Olympics, to address persistent and emerging threats, ensuring the Games remain a celebration of global excellence and unity.

India will set Records in Olympics as Host Nation in 2036

Ms. Ishwariya G.¹ & Mr. Sachin G²

¹Sports Management Student, SRM Institute of Science and Technology,
Kattankulathur, Chennai, Tamil Nadu, India

²BBA Student, Vels Institute of Science Technology and Higher Studies,
Pallavaram, Chennai, Tamil Nadu, India

Abstract:

Introduction: In this article we will present a data-driven analysis of sporting performance of Indian contingent in 2036 Olympic to be hosted by India. Looking at all of the Summer Olympics hosts from 1988 to 2024, all the countries won almost twice as many medals in their host year compared with their tally the previous Olympics.

Methodology: Planned Quantitative research to arrive on statistical conclusions is done through Explanatory graph based on secondary data. At this early stage forecasting the number of Olympic medals for India in 2036 is highly relevant based on Historical Data on Medal Boost to Countries as Host Nations for different stakeholders. In this research, we leverage the Historical data of the Medals tally from 1988 to 2024 of the Host countries performance compared to its previous Olympic results and also its previous 10 Olympic results. **Results:** India will set record in medal boost from 6 medals in 2024 to 24 medals in 2036, will also break records in athlete participation from 110 in 2024 to 550 participants in 2036 and will also shatter records in ranking from 71 in 2024 to 10 in 2036.

Conclusion: Based on this descriptive research it may be reasonable to expect India to set record, break record and shatter record in 2036 Olympics as host nation.

Strategies for Enhancing Sustainability and Zero Waste Solutions in Global Sporting Events

Ms. Latika Grover

*Teaching Cum Research Officer, Centre for Disaster Risk Reduction,
School of Internal Security and SMART Policing, Rashtriya Raksha University, Gandhinagar, Gujarat, India*

Abstract:

Global Sporting events serve as symbols of global unity and cultural exchange however they often leave significant environmental footprints. Although these large-scale events bring about series of investments in construction, transportation and tourism but also make the host city vulnerable to environmental degradation. The overdependence on non-renewable sources of energy for various lighting, temperature regulation and operating equipment, facilities and stadiums lead to increased carbon emissions and pollution. There is a need to make the infrastructure Environment friendly and sustainable in terms of utility and resources. This study will explore a SWOT (Strengths, Weaknesses, Opportunities and Threats) analysis of sustainable initiatives that can be undertaken to optimize the usage of infrastructure built especially for the event to justify its construction and costs. Waste generation is another major issue which plagues such sizeable events. Significant amounts of food waste and single use plastics used in packaging and water bottles produced during such events can negatively impact the environment if not managed properly. A mixed-methods approach combining case study analysis of

past global mega-sporting events, stakeholder interviews and secondary literature review, the study will evaluate the existing sustainability and waste management practices and identify gaps in implementation. The expected outcomes of the study will contribute to policy formulation and guide host cities toward integrating sustainable practices into the core planning processes from the preparatory stage itself. This research aligns with global climate objectives by promoting eco-friendly event management, ensuring both environmental responsibility and community well-being.

Keywords: *Global Sporting events, Sustainability Initiatives, Zero Waste Solutions, Environment footprint, SWOT Analysis*

Advancement and Future Directions for Sustainable Practices in Olympic Field Hockey: A Case Study on Paris 2024

Ms. Khushbu Sisodiya, Ph.D. Scholar

Mr. Vikas Singh, Ph.D. Scholar

Ms. Kajal Yadav, Ph.D. Scholar

Dr. Brij Kishore Prasad, Associate Professor

Lakshmibai National Institute of Physical Education, Gwalior, (M.P.), India

Abstract:

This case study explores the advancement and future direction for sustainable practices in hosting the Olympic field hockey, majorly focusing on the recent 2024 Paris Olympics game. A key element of this initiative is the introduction of the Poligras Paris GT Zero, the first carbon-neutral turf in the world, which is made from 80% sugarcane and produced using renewable energy. This modernization turf not only cuts down on water usage needing up to 39% less water than earlier versions but it also makes lower emissions of carbon throughout the duration of its existence. The International Hockey Federation (FIH), governance body of hockey is dedicated to making hockey a sustainable sport on a global scale, and the Paris Olympic Games make a crucial step in this direction. The effective application of sustainable practices, such as using existing venues and involving local communities, further boosts the events environmental responsibility. This study emphasizes how these innovations not just contribute to elite athletic performance but also establish a benchmark for future sporting events prioritize sustainability in hosting Olympic field hockey, ultimately contributing to a larger movement towards environmentally friendly practices in global sports.

Keywords: *Sustainability, Olympic Field Hockey, Poligras Paris GT Zero, Carbon-Neutral Turf, Environmental Responsibility*

Green Energy Strategies for Hosting the 2036 Olympics Sustainably in India

Ms. Kajal Yadav, Ph.D. Scholar

Ms. Khushbu Sisodiya, Ph.D. Scholar

Dr. Brij Kishore Prasad, Associate Professor

Lakshmibai National Institute of Physical Education, Gwalior, (M.P.), India

Abstract:

With the 2036 Olympics on the horizon, a sustainable approach will be more relevant than ever. A point emphasized in previous Olympic Games, where the environmental impacts of such events — including unsustainable construction practices and poor air quality — highlighted the need for renewable energy integration and sustainable practices (Schmidt, 2006). But India has a burgeoning renewable sector and, as such, stands in a position to host the Olympics under the banner of green technologies and environmental accountability. In our paper, we outline a comprehensive framework for sustainably hosting the Olympics including decentralized and community-based renewable energy systems, carbon-negative and regenerative infrastructure as well as community-level initiatives that could be scaled during the 2036 Olympics. India can cut the carbon footprint of the Games by up to 80% by employing decentralized solar and wind micro grids, carbon-sequestering building materials, and smart technologies. In addition, by using waste management innovations, circular economy practices, and gamified sustainability initiatives we can further decrease waste by 60% and help drive sustained behavioural change. In a nutshell, by incorporating these approaches, India can set an example for the world in promoting sustainable practices in significant global events, and it can, therefore, make its mark over the years so that the 2036 Olympics are recalled not only for sporting superiority but also for being a game changer event for the environment.

Introduction of The Olympic Movement through Exhibition – A case study

Dr. Manoj Deolekar¹, Mr. Nikhil Sonone²

¹Center Superintendent, ²Athletics Coach

Jnana Prabodhini Nigdi Center, Pune, Maharashtra, India

Abstract:

The aims of Olympic movement such as building peaceful and better world, sport at the service of harmonious development of man, unity and Integrity in the athletes of world, practise of sports is a human right are totally unknown to the common people. This study is about an effort of a school to enlighten society about Olympic Movement. A sports school run by Jnana Prabodhini, Nigdi, Pune, Maharashtra studied Olympics and Exhibited the information for the society in the period of Paris Olympics 2024. To reach the aims and objectives of Olympics to all, the educational programs of Olympic movement should be conducted at grassroot level.

This study involved 30 teachers and coaches along with 50 school athletes. The duration of the study along with preparation of Exhibition was carried out for two months.

The Exhibition of 100 charts regarding the history of Olympics, India in Olympics, Games in Olympics, Sports Sciences evolved through this movements, records etc. were created in this activity. More than 5000 students from various schools and sports lovers visited the exhibition. The activity of informative as well as educative to all. The respect towards the games, Olympic movement and towards sports person was found to be increased.

Keywords: *Olympic Movement, Olympism, Exhibition, Education*

Socioeconomic Effects of Hosting Olympics: A Case Review Study of the 2008 Beijing and 2012 London Olympics

¹Ms. Smriti Gupta, ²Dr. Purnima Joshi, ³Dr. Tanvi Singh

¹Student, Swarnim Gujarat Sports University, Vadodara, Gujarat, India

²Assistant Professor, Rashtriya Raksha University, Gandhinagar, Gujarat, India

³Assistant Professor, Rashtriya Raksha University, Lucknow Campus, Uttar Pradesh, India

Abstract:

Hosting the Olympics significantly affects the economic, social, and cultural landscape of host cities. This research compares the 2008 Beijing and 2012 London Games, analyzing the direct economic impacts of infrastructure development, employment, urban regeneration, and community engagement, as well as the cultural effects of the events. Both cities used the Olympics to drive urban regeneration and enhance international standing, but with different strategies. Beijing with an estimated investment of \$43 billion showcased China's emergence as global power. Beijing focused on sustainability, green technologies, and engaging over 400 million youth through educational programs to promote sports culture. London, with a budget of £9.325 billion, focused on infrastructure development and legacy planning, transforming East London through projects like the Olympic Park. Both cities saw significant short- and long-term economic benefits, with the London Games contributing £14 billion to the UK economy.

Socially, Beijing's government invested in Olympic education, while both cities fostered community participation. Culturally, Beijing showcased Chinese heritage, while London emphasized multiculturalism through the Cultural Olympiad, leaving lasting cultural impacts.

The study concludes that while the Olympics offer host cities opportunities for global leadership and growth, long-term success requires careful financial and sustainability planning. These insights are useful for future host cities for balancing economic, social, and cultural benefits.

Keywords: *Olympics, Socioeconomic, Beijing 2008, London 2012, Urban Regeneration, Sustainability*

Green Infrastructure and Sustainable Building for the Future Olympics

Ms. Rathod Heli Kamlesh¹ and Dr. Debraj Bhattacharya²

¹M.Sc. Student, School of Sports Studies, TransStadia University, Ahmedabad, Gujarat, India

²Assistant Professor, School of Sports Studies, TransStadia University, Ahmedabad, Gujarat, India

Abstract:

Background of the Study: The Olympics represent international unity and athletic accomplishment, yet they can profoundly affect the environment due to the substantial infrastructure development they usually require. The planning and execution of mega-events increasingly emphasise green infrastructure, propelled by heightened awareness of environmental concerns and the imperative for sustainable development. Incorporating natural processes and sustainable practices into urban development reduces environmental damage via green infrastructure. This improves the resilience and sustainability of host cities. **Methodology:** This study employed a qualitative approach, examining various sources to understand the implementation and rationale behind green infrastructure projects at recent Olympic events. Several of these sources included official reports from the organising committees, scholarly articles on green infrastructure and sustainable urban development, as well as trustworthy websites from organisations like the International Olympic Committee (IOC) and the United Nations Environment Programme (UNEP). The primary objective of the study was to identify patterns, best

practices, challenges, and outcomes associated with green infrastructure initiatives in cities that have hosted the Olympics. Results: This study showed that green infrastructure is being used more and more in recent Olympic Games. Some important examples are the urban greening projects in Beijing in 2008 that helped clean up the air and increase biodiversity, the Olympic Park in London in 2012 that was designed with biodiversity in mind, the efforts to restore the environment in Rio in 2016, the use of new water-saving technologies in Tokyo in 2020, and the focus on reusing infrastructure and renewable energy in Paris in 2024. These projects indicate a shift towards more sustainable practices; however, challenges persist in ensuring long-term maintenance, securing necessary funding, and effectively integrating green infrastructure into comprehensive urban planning. Conclusion: Improving host city sustainability and resilience as well as lowering Olympic environmental impact depends on green infrastructure. To maximise environmental and social benefits, Future Games has to give top priority a thorough strategy for planning green infrastructure including fair resource distribution, strong governance, and community involvement. Consistent development of creative ideas in biophilic design, intelligent architecture, nature-based disaster resilience, and intersectoral cooperation will help the Olympics to become more environmentally sustainable.

Fortifying the Arena: Security Strategies, Technological Integration and Lessons from Mega-Event Security Breaches—Insights for the 2036 Olympics

Mr. Ashwani, Rashtriya Raksha University, Gandhinagar, Gujarat, India

Ms. Varsha Rathore, TCRO, SISSP, Rashtriya Raksha University, Gandhinagar, Gujarat, India

Abstract:

Global Spectacle like Olympics and high-profile event like Indian Premier League (IPL) presents unique challenge in security planning and management. These events attract massive crowd, media coverage, economy and diverse stakeholder making them lucrative target for various threats actors. In today's time these event poses asymmetric threat ranging from terrorism to cybersecurity to lone wolf attack. This research paper focus on nuances of security management at mega sporting event such as Olympics. Researcher have first-hand experience in managing security of Wankhede Stadium during IPL matches. This paper focuses on importance of security risk assessment, technological convergence and geographical considerations to address evolving threats, with a forward-looking perspective aimed at enhancing preparations for the 2036 Olympics.

A detailed analysis of security breaches happened during the previous Olympics and similar sporting event underscore the importance of comprehensive risk assessment, continuous threat monitoring and a well-rehearsed contingency planning. By incorporating insight from past event, the study highlights the importance of use of technology like- real time surveillance, predictive analysis, strong stakeholder alliances, multi-layer and multi factor security approach.

Through an extensive review of academic literature, practical case studies and researcher experience in managing some of the mega event, this paper bridges the gap between theoretical framework and on ground executions. The finding highlighted the importance of proactive threat anticipation and effective countermeasures specific to geographical location and threat perception of the mega event.

In the era of ever evolving threat and technological advancement this study helps by contributing actionable recommendation for enhancing security in upcoming Olympics of 2036.

History to Glory: The Journey of Cricket to the Los Angeles Olympics 2028

Dr. Moradhvaj Singh, Assistant Professor, LNIPE, Gwalior, M.P., India

Dr. Purnima Joshi, Assistant Professor, School of Physical Education and Sports,

Rashtriya Raksha University, Gandhinagar, India

Mr. Om Solanki, Student, Swarnim Gujarat Sports University, Vadodara, Gujarat, India

Abstract:

Cricket's inclusion in the 2028 LA Olympics marks a transformative chapter in its evolution from a rural pastime in 16th-century England to a globally celebrated sport. Over centuries, colonial expansion and cultural integration propelled cricket's popularity, particularly in nations like India and Australia, where it symbolizes national pride. Despite its global appeal, cricket has faced challenges in aligning with the Olympic framework, including issues with format, infrastructure, and global representation. The advent of the Twenty20 (T20) format addressed many of these hurdles, offering a spectator-friendly, inclusive version of the game that aligns with the logistical demands of multi-sport events.

The International Cricket Council (ICC) has played a pivotal role in advancing cricket's Olympic aspirations through initiatives focused on global development, promotion via multi-sport platforms, and collaboration with the International Olympic Committee (IOC). Olympic inclusion is anticipated to enhance cricket's global reach, stimulate economic growth, and promote gender equality while fostering cultural diplomacy. Challenges such as scheduling, infrastructure, and ensuring diversity in participation persist but are being actively addressed. As cricket prepares to debut at the 2028 Los Angeles Olympics, this milestone underscores its adaptability, cultural significance, and potential to captivate a broader global audience, ensuring long-term sustainability and a new era of global recognition. India is one stop for all the Cricket infrastructure, global dominance in administration made India a soft power, Inclusion of Cricket in Olympics Los Angeles 2028 would highlight India's Soft Power prowess in the Olympic Circuit and also impact the 2036 Olympic bidding prospectus for India.

Keywords: *Cricket, 2028 LA Olympics, Twenty20 (T20), International Cricket Council (ICC), Olympic inclusion, global sport, cultural diplomacy, gender equality, Soft Power Cricket*

Upholding Integrity in the Olympic Games: Legal Frameworks and Ethical Challenges

Mr. Pulkrit Verma¹, Mr. Naman Kumar Sinha²

¹Research Scholar, School of Integrated Coastal and Maritime Security Studies (SICMSS),

²Masters of Law, School of Criminal Law and Military Law (SCLML),

Rashtriya Raksha University, Gandhinagar, Gujarat, India

Abstract:

The Olympic Games stand as a global symbol of unity and excellence but have faced numerous governance challenges, including allegations of corruption, lack of transparency, and ethical violations. This study examines the legal framework and regulatory measures designed to promote ethical governance and transparency in the Olympics. It analyses international treaties, the code of conduct of organizations such as the International Olympic Committee (IOC), and the roles of various national committees. The research employs a qualitative methodology, including a comprehensive review of legal documents and case studies of past Olympic events. It assesses the implementation of key rules, such as the IOC Code of Ethics, anti-doping regulations, and anti-corruption laws in host countries. Additionally, the paper explores the role of independent oversight institutions

in ensuring ethical accountability. The findings reveal significant progress in addressing ethical concerns, improving financial transparency, and strengthening anti-doping measures. However, notable challenges remain, particularly in addressing conflicts of interest, political interference and the protection of athletes' rights. While existing legal frameworks provide a foundation for ethical governance and transparency in the Olympic Games, further reforms are essential to ensure fair and accountable practices. A unified global legal framework, supported by robust enforcement mechanisms, is critical to upholding the integrity of the Olympic movement.

Keywords: *Olympic Games, Ethical Governance, Transparency*

Harnessing Global Commons Through the Olympic Games: An Interdisciplinary Agenda Integrating Sports Diplomacy, International Legal Frameworks, Sustainable Development Strategies and Multilateral Governance Structures

Mr. Shivam Jaiswal, Rashtriya Raksha University, Gandhinagar, Gujarat, India

Abstract:

The Olympic Games demonstrates a symbolic intersection of global unity, competitiveness, and technocratic cultural exchanges and can burgeon into a modern arena for international diplomacy. The Games present a unique opportunity to address urgent global challenges, especially pressing issues like climate change, energy sustainability and holistic participation of the global community in Environmental Impact Mitigation. The objective of this research is two-fold, first to cultivate the philosophy of Arvid Pardo (1967) on global commons and situate the 'Olympics as a shared resource that transcends national boundaries, fostering interdependence and international governance'. The research builds on Ostrom's (2009) principles of collective action along with Keohane and Nye (1977) theories of interdependence and soft power to study the role of sports diplomacy and international legal frameworks to establish the Olympic Games as a microcosm of global governance, where the shared ideals of sustainability, equity, and innovation can converge. Secondly, this research endeavours to contribute to a more meticulous understanding of climate governance by critically examining the contemporary international legal frameworks in light of inclusivity, justice, and resilience. The UNFCCC and the Paris Agreement laid the foundation for global climate cooperation but has repeatedly failed to deal with the systemic inequities that disproportionately affect the habitation of the developing nations and the marginalized/indigenous communities.

In principle, this study endeavours to carry out doctrinal research to critically examine the prospects of the Olympic Studies Research Centre (OSRC) as a platform for advancing green technology adoption and sustainable development, particularly in the Global South and peripheral regions. The International Governance Theory provides the prospect to explore how OSRC can act as a platform-hub within global governance structures to integrate sustainability and green energy initiatives into the Olympic Movement. It provides scope to scrutinize how OSRC can align with the objectives of international frameworks such as the Paris Agreement and Sustainable Development Goals (SDGs), particularly SDG 7 (Affordable and Clean Energy) and SDG 13 (Climate Action) in shaping Olympic sustainability efforts, through collaborative mechanisms.

The study aims to synchronise environmental sustainability with the application of Sports Diplomacy by leveraging Techno-Diplomacy (green energy exchange) to balance the disproportionate vulnerabilities of the Global South with erudite and holistic transnational policies. This interdisciplinary approach contributes to the academic discourse on International Climate Governance and avers that justice-oriented frameworks, reinforced by multifaceted platform such as Olympic Studies Research Centre (OSRC) and Bharat Centre for Olympic Research and Education (B-CORE) would be required to address the questions pertaining to environmental impact mitigation in a holistic manner. This research seeks to evaluate the prospects of Olympic Studies

Research Centres (OSRCs) across the world to facilitate comprehensive and urgent response initiatives to establish Olympic associations as pivotal non- state actors to confront climate challenges and promote sustainable development.

Keywords: *Olympic Research, Sustainable Development, Transnational Policies, Green Energy Exchange, Climate Action*

RRU/BCORE/ORC/Ab/62

From Bids to Gold: A Comparative Study of Strategic Frameworks in Olympic Host City Selection

*Mr. Animesh Kumar Jain,
Research Officer, Rashtriya Raksha University, Gandhinagar, Gujarat, India*

Abstract:

The selection of an Olympic host city is a multifaceted process involving strategic planning, economic foresight, and sociopolitical considerations. This research examines the strategic frameworks and criteria employed in Olympic host city bidding, focusing on historical trends and key factors influencing successful bids. Through a comparative analysis of past Olympic Games, including London 2012, Rio 2016, Tokyo 2020, and Paris 2024, the study identifies critical elements such as sustainability, infrastructure readiness, and geopolitical dynamics that contribute to a winning proposal. Additionally, the research explores the long-term economic, social, and environmental impacts on host cities, providing actionable insights for future bidders. By synthesizing qualitative and quantitative data, this paper highlights best practices and offers recommendations to optimize the bidding process and ensure sustainable legacy outcomes.

Keywords: *Olympic Host City, Strategic Frameworks, Bidding Strategies, Sustainability, Economic Impact, Geopolitics, Infrastructure Development, International Olympic Committee (IOC), Legacy Outcomes, Comparative Analysis*

Comparative Evaluation of Indian Cities for the 2036 Olympics

Mr. Bipradeep Singha Roy¹, Dr. Tanvi Singh²

¹*Student of BPED, Bharati Vidyapeeth University, Pune, Maharashtra, India*

²*Assistant Professor, Rashtriya Raksha University, Gandhinagar, Gujarat, India*

Abstract:

India's rich sporting heritage and growing prominence in hosting international events position it as a potential host for the 2036 Olympic Games. This study, conducted by the School of Physical Education and Sports at Rashtriya Raksha University, evaluates the suitability of four Indian cities—Ahmedabad, Guwahati, Hyderabad, and Delhi—for hosting this prestigious event. Using a comparative analysis approach, the study assesses infrastructure readiness, environmental conditions, and tourism potential, drawing data from government reports, environmental studies, and records of past events. Key factors analyzed include the air quality index (AQI), sports infrastructure, cultural diversity, and financial feasibility.

Ahmedabad emerged as the most suitable candidate due to its superior air quality, advanced sports infrastructure—including the Narendra Modi Stadium and planned developments under the Sardar Vallabhbhai Patel Sports Enclave—and cultural attractions such as the Sabarmati Ashram and Statue of Unity. Guwahati ranked second, benefiting from favourable environmental conditions and sports facilities like the Indira Gandhi Athletics Stadium, though limited international connectivity remains a challenge. Hyderabad placed third,

bolstered by its history of hosting international events and established infrastructure but hindered by high AQI levels. Delhi, despite world-class infrastructure and a strong legacy in hosting mega-events like the Commonwealth Games, ranked last due to severe air pollution and associated health risks.

The study concludes that Ahmedabad is the most viable candidate, emphasizing its infrastructure projects and relatively better environmental conditions. Recommendations include further research into political factors, funding strategies, and long-term developmental plans to strengthen India's bid for the 2036 Olympics while promoting sustainability and cultural diversity.

RRU/BCORE/ORC/Ab/64

An Analysis of Glory and Burden for India as Olympic Host; Learning from the Narratives of Past Host Cities

Mr. Aman Mishra,

College of Physical Education, Bharati Vidyapeeth, Pune, Maharashtra, India

Abstract:

The Olympic Games, recognized as the largest international sporting event, bring opportunities and challenges to host nations. This study investigates the dual aspects—glory and burden—of hosting the Olympics, focusing on India's potential bid for the 2036 Olympics. Drawing on the narratives of past hosts such as Barcelona (1992), London (2012), and Rio de Janeiro (2016), the research examines the economic, social, and environmental implications of hosting the Games. The paper finds that India's potential bid for the 2036 Olympics offers opportunities and challenges. Hosting the Games could boost India's global visibility, stimulate economic growth through tourism and infrastructure projects, and foster sports development by enhancing facilities and encouraging participation. However, the financial burden of high infrastructure costs, the risk of social displacement from urban development, and potential environmental harm pose significant concerns. To navigate these complexities, a comprehensive cost-benefit analysis, community engagement, a focus on sustainability, and legacy planning are essential. By adopting these strategies, India can maximize the benefits of hosting the Olympics while addressing its inherent risks, paving the way for a successful and impactful event.

Keywords: *Global Visibility, Economic Growth and Burden, Sports Development, Environmental Harm, Legacy Planning*

RRU/BCORE/ORC/Ab/65

Prioritizing Mental Health for Indian Athletes: A Strategic Review for Achieving Excellence at the Olympic Games

Dr. Debraj Bhattacharya¹ and Ms. Nimisha Sarda²

¹*Assistant Professor, School of Sports Studies, TransStadia University, Ahmedabad, Gujarat, India*

²*B.Sc. Student, School of Sports Studies, TransStadia University, Ahmedabad, Gujarat, India*

Abstract:

Background of the Study: India's pursuit of Olympic excellence necessitates a holistic approach addressing both physical and mental well-being. However, limited research exists on the mental health of Indian athletes. Historically, the focus has been on physical training, neglecting psychological needs. Athletes face socio-cultural challenges, performance pressures, and inadequate mental health resources, impacting performance at major events. The study primary focused on the domain of metal health support and formulates a framework in

order to emphasize athletes' physiological wellbeing to achieve favorable outcome in Olympics. Methodology: The study used a systematic literature review to find the challenges which was derived due to mental health condition and boost Indian athlete in psychological areas. Limited research has been conducted in this area. All the research studies and Olympic reports that has been published in electronic database from 2014 to 2024 were reviewed using the key words "Mental Health in Sports" and "Psychological well-being" among which twenty articles (n=20) has been systematically examined in order to evaluate mental well-being and support on performances of athletes. Findings: The study found that mental health stability was significantly impact on athlete performance. Though, inadequate mental health support placed Indian athlete in challenges which comes to lack of awareness, and limited professional services. The focal point of the study lies in the requirement of combination with systematic sports psychological framework and mental health training throughout Indian sports culture to amplify the overall output in Olympics. Conclusion: Mental health should be applicable to accomplish sustainable success at the upcoming Olympics. The study has concluded that, structural frame work in mental health support should involve in the training regimes essentially. This method would increase both the level of performance and global recognition of Indian athletes in Olympic.

Keywords: *Mental health, Indian Athletes, Sports Performance, Psychological Support, Olympics*

The Effectiveness of Core Exercise in Reducing Dysmenorrhea Pain of Olympic Women Athletes: A Systematic Review

Ms. Masuda Khatun¹, Dr. Dileep Tirkey², Mr. M. Shibagtullah Shah Kadri³

¹*Research Scholar, Department of Physical Education and Pedagogy, LNIPE, Gwalior, M.P., India*

²*Associate prof. Department of Physical Education and Pedagogy, LNIPE, Gwalior, M.P., India*

³*Research Scholar, Department of Exercise Physiology, LNIPE, Gwalior, M.P., India*

Abstract:

Background: Dysmenorrhea pain is a common gynecological issue brought on by a progesterone imbalance. The quality of life for Olympic women athletes may also be affected. Physical and psychological problems that affect daily activities, social interactions, and Olympic sports performance include abdominal aches and monthly fatigue. Core exercise is a non-pharmacological therapy that can help reduce menstrual pain. **Purpose:** This study aims to see the Effectiveness of Core Exercise in Reducing Dysmenorrhea Pain of Olympic Women Athletes. **Methods:** A systematic literature review is conducted as part of this investigation for This study's systematic literature evaluation focuses on how well core exercises work to lessen the pain that Olympic women athletes experience from dysmenorrhea. The literature on dysmenorrhea pain published between 2014 and 2024 was included in the current investigation. A number of research gaps were found. The ADO (Antecedents, Decision, and Outcomes) model, created by Paul and Benito (2017), was used to identify and analyze the dysmenorrhea pain experienced by Olympic Women Adolescent Girls (n=14). English- language, original-type papers about the advantages of core training in easing the pain of dysmenorrhea in Olympic women athletes. The predefined inclusion and exclusion criteria applied to all free complete texts. This review was completed in accordance with the PRISMA guidelines. Data collection factors included prevalence rates, study characteristics, Core Exercise results, and factors related to lowering adolescent menstrual discomfort. Teenage girls' health can be considerably improved by using core exercises as a cure for menstruation pain. Systematic literature searches on menstrual discomfort were conducted using electronic databases, including the Cochrane Library, PubMed, Google Scholar, WOS, and Scopus. The relevance of full-text publications published between 2015 and 2024 was assessed, and reference lists were cross-checked for additional relevant studies. **Finding:** The present study identified that influence Reducing Dysmenorrhea Pain of Olympic Women Athletes. **Originality/ Value:** When Olympic Athlete regularly perform core exercise, the study's findings indicate that core exercises can help them experience less menstrual pain. Teenagers can lessen menstrual pain by practicing core exercise on a regular basis. Both inside and outside of the sites of referred menstrual pain, women with menstrual pain are more

sensitive to experimental pain than women without menstrual pain. Crucially, the increased sensitivity to pain is noticeable even during menstrual pain-free periods, demonstrating that chronic variations in pain perception are not limited to the uncomfortable menstrual phase. In later life, this increased sensitivity to pain may make one more vulnerable to other chronic pain problems; dysmenorrhea is one such danger.

Past Influence of Mega Events in Developing and Developed Nations

Mr. Devendra Pal, Trainee Teacher at Lincoln Minster School, England, UK

Mr Ashwini Prajapati, M.P.Ed Student, LNIPE, Gwalior M.P., India

Abstract:

Introduction: This study focuses on the influence of holding international mega sports events towards the cognition of economic, social, and infrastructural landscapes. This study critically analyses the Commonwealth Games (CWG) Delhi 2010 and CWG Gold Coast 2018, focusing on planning processes, infrastructure development, economic impacts, and event legacies. The purpose is to compare the organizational dynamics and outcomes between a developing and a developed nation hosting these events. **Methodology:** A comparative analysis framework was adopted, utilizing secondary data from post-event reports, academic literature, and government documents. The study examined key aspects of the planning and bidding processes, infrastructure investment, and socio-economic effects. Analytical methods included thematic evaluation and contextual interpretation of data to identify commonalities and differences in event management. **Results:** The analysis revealed that CWG Delhi 2010 contributed to infrastructure growth and sports culture development in India but faced challenges like corruption and resource mismanagement. Conversely, CWG Gold Coast 2018 demonstrated effective planning and execution, yielding significant economic benefits, particularly in tourism and regional development, leveraging Australia's established infrastructure and experience. **Conclusions:** While both events left legacies, the outcomes underscore disparities between developing and developed nations in hosting mega-events. For developing nations, infrastructure investments can spur growth but require stringent governance. Developed nations benefit from leveraging existing resources for sustainable impacts. These findings highlight the need for tailored strategies to optimize benefits based on host nation contexts.

Keywords: *Commonwealth Games, Event Management, Infrastructure Development, Economic Impact, Legacy.*

RRU/BCORE/ORC/Ab/68

An Analytical Study of Security Measures for Mega Events: Upcoming Threats and Challenges

Mr. Viveka Kumar, Research Scholar,

School of Criminal Law and Military Law,

Mr. Ashutosh Mishra, LL.M.,

School of Integrated Coastal and Maritime Security Studies,

Rashtriya Raksha University, Gandhinagar, Gujarat, India

Abstract:

Danger looms in Mega events such as international sports tournaments like the Olympics (winter or summer), FIFA, etc. Antisocial elements like terrorist groups always threaten Athletes, the audience, and the local population of the country where the event is going to be organized. Threats are always a core matter of national security and international security too. Threats create chaos and symbolize political embarrassment and financial

risk for the host and participating countries. The attack on the athletes and audience is deemed to be an attack on the sovereignty, of the country they belong to and the country hosting the event. Intelligence agencies play a vital role in security aspects. The security of the mega events depends on the host country and other allied countries to protect the players and other concerned persons who are directly or indirectly associated with them. Famous Attacks like the Summer Olympics in Munich in 1972, the Vancouver Winter Olympics in 2010, railways services disturbance in 2024 during the Paris Olympics, the 2008 Beijing bombings, the 1996 Atlanta bombing, etc. The modes of threat are terror, Cyberattacks, crowd issues, and various criminal acts.

The article emphasizes security challenges and the security strategies during mega-events to protect the interest of the concerned stakeholders and adopt multi-layered security, advanced technology using Artificial intelligence, private security agencies, and international collaboration.

Abstract:

The Olympics is a worldwide significant sporting event that enables the amalgamation of people across different countries. Throughout the history of mankind, nations have operated the Olympics as a platform to showcase their strength, their geopolitical influence, and create a positive international reputation.

Taking the case study of China's 2008 Beijing Olympics and France's 2024 Paris Olympics, both of which are pivotal events in the Olympic calendar. By examining the implications associated with these events, this study seeks to explore the strategies employed by host countries to capitalize on the Olympics in order to promote their national interests on the global stage.

The 2008 Beijing Olympics marked a crucial moment for China, by demonstrating its emergence as a great power in the current era through substantial economic growth, technological progress, and cultural revitalization.

In contrast, the 2024 Paris Olympics were founded upon principles of sustainability, inclusivity, and resilience, aimed at addressing pressing challenges such as economic recovery, environmental sustainability, and the evolving dynamics of global power relations.

Through a comparative outlook, this paper identifies the recurring themes such as the practice of sports diplomacy, the application of soft power, and the construction of a national policy that aligns with Olympic values. Furthermore, these elements are subject to continuous modification, as each nation looks at them from a different approach and priorities.

In a nutshell, this study will give the readers a comprehensive understanding of the complex dynamics underlying the Olympic Games, wherein sporting events are perceived as an important component of the larger geopolitical power landscape.
